Chief, Division of Colleges and Professional Schools

INTRODUCTION

The statistics of 1,078 institutions of higher learning furnished to the Office of Education for the year 1929-30 constitute the main body of this report. The figures were obtained by means of a form, a copy of which was sent to every institution of collegiate grade in the United States of which the Office of Education had information. In some cases representatives of the Office of Education assisted in making the returns as complete and as accurate as possible.

The statistics of teachers colleges and normal schools are not included, as a separate report is issued for these institutions.

Included in the 1,078 institutions are 164 schools of theology, 136 schools of law, 74 schools of medicine, 40 schools of dentistry, 67 schools of pharmacy, 10 schools of veterinary medicine, and 8 schools of osteopathy. All but 153 of these professional schools are departments of universities and colleges.

Of the total number of institutions reported, 246 are under public control and 832 are under private control. Of the 246 under public control, 117 are 4-year colleges and professional schools and 129 are junior colleges; of the 832 privately controlled institutions, 684 are 4-year colleges and professional schools and 148 are junior colleges. These figures are presented in tabular form on page 322.

Since the year covered by these statistics is the close of a 10-year period of great growth in the field of higher education, some comparisons with the year 1919-20 are made. In all such comparisons it must be remembered, however, that the Office of Education depends wholly upon the voluntary cooperation of the institutions reporting.

The data are, accordingly, not complete, nor are interpretations of the questions asked always uniform from institution to institution. The validity of any 10-year comparisons is influenced further by the fact that returns were somewhat more complete in 1930 than in 1920, and, therefore, figures representing increases for the period are in general somewhat higher than the actual facts.

Type of institution, school, or department	Publicly controlled	Privately controlled	Total
Universities, colleges, and professional schools			
Degree-granting institutions	117	684	801
Junior colleges	129	148	277
Professional departments			
Theology	0	75	75
Law	42	61	103
Medicine	31	33	64
Dentistry	12	24	36
Pharmacy	34	24	58
Veterinary medicine	9	1	10
Independent professional schools	7	146	153

During the decade 1919-20 to 1929-30 many institutions of higher learning were added to the list of institutions reporting to the Office of Education. No previous decade during which statistics have been compiled has seen such apparent growth in the number of institutions of college grade. While the junior college movement was a considerable factor in this growth, it was less so than might be expected. Of the 408 institutions added to the college list during the decade, 183 were 4-year colleges and professional schools and 225 were junior colleges. While there were but 42 more junior colleges than 4-year colleges added to the list, the percentage of increase for the 4-year colleges was but 29.6, while for junior colleges it was 432.7. In 1919-20 there were but 52 junior colleges on the college list; in 1929-30 there were 277. The institutions included in this number are confined to those which offer not less than two years of college work.

JUNIOR COLLEGES

According to the returns made to the Office of Education there was an unprecedented number of higher institutions established by States and municipalities and school districts during the decade. In 1919-20, there were reported 109 publicly supported higher institutions, 99 of which were 4-year institutions and 10 of which were junior colleges; in 1929-30, the number of institutions publicly controlled had increased to 246. Of this number, 117 were 4-year colleges, and 129 were junior colleges. Twenty of the publicly supported junior colleges which reported in 1929-30 are State controlled, while 109 are under municipal or district management. In 1919-20 two of the publicly supported junior colleges whose statistics were reported were State controlled, while 8 were parts of city or district school systems. All of the 20 State-supported junior colleges reporting in 1929-30

have been established in the past 10 years or have been changed to junior college status from institutions already established. One of the State-supported junior colleges listed in 1919-20 has since become a 4-year college, while the other has become a branch of the State university of the State in which it is located. One hundred and one more municipally supported junior colleges reported in 1929-30 than did in 1919-20.

The increase in the number of privately supported junior colleges during the decade was not so great as was the increase in the number of publicly supported institutions. Forty-two privately supported junior colleges reported in 1919-20 and 148 reported in 1929-30. While formerly there were many more junior colleges under private control than under public control, the desire of junior colleges to obtain senior college status is more readily attainable by the privately supported institutions, and a number of them have been raised to this status within the past decade.

The greatest development in the junior-college movement has been in the Middle West, although California leads in the number of these institutions. That State was the first to enact a law authorizing high-school districts to add two years to the traditional 4-year course, and the publicly supported junior-college movement has attained greater momentum in California than it has in any other State in the Union. While Texas leads in the number of privately supported junior colleges, it reported also 19 publicly supported junior colleges in 1929-30, and its rate of increase in the number of privately supported institutions has not been so great as has that of some other States.

The following table shows the distribution by States of junior colleges under State, city, or district, and private control for the years 1919-20 and 1929-30.

It will be noted that there were in 1929-30 but nine States which did not report any junior colleges, either publicly or privately supported—Delaware, Maine, Montana, New Hampshire, Rhode Island, South Carolina, Vermont, Wisconsin, and Wyoming.

State	1919-20			1929-30

PROFESSIONAL SCHOOLS

The increase shown in the number of higher educational institutions reporting in 1929-30 over the number reporting in 1919-20 was due in part to the larger number of professional schools which reported for the latter year. The report for 1929-30 shows an increase of 55 in the number of schools of theology, of 28 in the number of schools of law, and of 12 in the number of schools of pharmacy. In number, schools of medicine and of dentistry have remained almost stationary during the past 10 years. In 1919-20 there were 79 recognized medical schools, 77 of which reported their statistics. In 1929-30 there were 77 recognized medical schools, 74 of which reported. In 1919-20 the Office of Education listed 51 schools of dentistry, 40 of which reported.

During the following 10-year period on account of the higher standards set for dental schools by the Dental Educational Council of America the number of dental schools was reduced by 10. All but one of the remaining schools reported in 1929-30. Colleges of veterinary medicine, which in 1919-20 numbered 15 were, in 1929-30, reduced to 11, 10 of which reported. Schools of osteopathy have been added to the list of professional schools since 1919-20. In 1929-30, eight of these institutions reported.

INSTITUTIONS OF HIGHER LEARNING FOR NEGROES

The increase in the total number of universities, colleges, and professional schools since 1919-20 was due in very small part to the addition to the college list of a number of institutions for Negroes. During the decade, as the advancement in the standards of higher institutions for Negroes warranted it, the institutions were added to the list. In 1919-20 there were but 15 institutions for Negroes listed among the universities, colleges, and professional schools. They were distributed as follows: Alabama, 1; District of Columbia, 1; Georgia, 5 (1 an independent theological seminary); Maryland, 1; North Carolina, 1; Pennsylvania, 1; South Carolina, 1; Tennessee, 3 (1 an independent medical college); Virginia, 1. In 1929-30 there were 41 institutions, distributed as follows: Alabama, 1; Arkansas 2; District of Columbia, 1; Georgia, 7 (1 an independent theological seminary); Kentucky, 1; Louisiana, 2; Maryland 1; Mississippi 3; North Carolina, 5 (1 a junior college); Ohio, 1; Pennsylvania, 1; South Carolina, 1; Tennessee, 5 (1 an independent medical college); Texas, 7; Virginia, 2; West Virginia, 1.

ENROLLMENTS

In 1929-30 the 1,078 universities, colleges, and professional schools reporting enrolled 971,584 students, 604,243 men and 367,341 women. These were distributed among the several types and levels of schools and among the publicly and privately supported institutions as follows:

Department	Enrollment, 1929-30		
	Men	Women	Total
Preparatory	27,766	19,543	47,309
Collegiate	441,485	311,842	753,327
Graduate	29,070	18,185	47,255
Professional	92,786	5,255	98,041
Special classes	15,923	14,225	30,148
Total (excluding duplicates)	604,243	367,341	971,584
Students in publicly controlled institutions	244,784	145,613	390,397
Students in privately controlled institutions	359,459	221,728	581,187

During the 10-year period 1919-20 to 1929-30 enrollments at universities, colleges, and professional schools, including preparatory and special students, increased 86.2 per cent. Contrary to what might be expected, this was not the greatest increase during any 10-year period of American higher education. In the decade 1909-10 to 1919-20 there was an increase of approximately 90 per cent in college enrollments. The figures for both 1909-10 and 1919-20 contain a larger number of students in preparatory departments and in special courses.

There were 12,000, or 20.2 per cent fewer students enrolled in preparatory courses in 1929-30 than there were in 1919-20, and 35,711, or 54.2 per cent fewer students designated as special or unclassified in the later year than in the earlier year. The decrease in the figures in the first instance is due to the abandonment by institutions of higher learning of much of the preparatory work formerly offered. In the case of special students it is undoubtedly very largely due to two tendencies: Relaxation on the part of colleges of the rigid curriculum requirements maintained for regular standing, and the increase in the number of high-school graduates prepared to undertake a 4-year college course. Although there was a great reduction in the number of men listed as unclassified or special students, the reduction was not nearly so great as was the case in the number of women students so listed. In 1919-20 there were 27,533 men and 38,326 women enrolled in unclassified or special courses, while in 1929-30 there were 15,923 men and 14,225 women enrolled in such courses.

Taking into account only regular students in collegiate, graduate, and professional departments, the percentage of increase in student enrollment was slightly in favor of the decade 1919-20 to 1929-30. The increase in the number of students in these departments during the earlier decade was 109.5 per cent; in the later decade it was 112 per cent. In the collegiate departments the percentage of increase for the two decades was almost identical; for the decade ending 1919-20 it was 121.6 per cent; for the decade ending 1929-30 it was 121 per cent. The figures for the two decades show that a very much greater proportion of students now continue on for graduate and professional study than was the case 10 years ago. In graduate departments particularly the increase in student enrollment between 1919-20 and 1929-30 was very large, amounting to 202.7 per cent; for the earlier decade it was 70.5 per cent. While the increase in professional departments was not so great as in graduate departments, it was beyond what might have been anticipated in view of the higher entrance requirements which have been effected in some of the professional departments during the past 10 years. As compared with a 45.5 per cent increase in enrollments in professional departments for the decade ending 1919-20, the increase for the decade ending 1929-30 was 71.6 per cent.

The increasing popularity of higher education under public control is manifested in the number of students attending publicly supported colleges and universities. In 1929-30 there were 390,397 students, or 40.2 per cent of the total number of college students, enrolled in the 246 publicly supported colleges and universities, while in the same year there were 581,187 students, or 58.8 per cent of the total number, enrolled in the 832 privately supported colleges and universities. The number of students in publicly supported institutions increased 194,521, or nearly 100 per cent, during the decade 1919-20 to 1929-30, while the number in privately supported institutions increased 255,309, or 78.3 per cent. Of the students enrolled in publicly supported institutions in 1929-30, men comprised 60 per cent and women 40 per cent; of the students enrolled in privately supported institutions, men comprised 61.6 per cent and women 38.4 per cent.

Women students in higher education are increasing at a more rapid rate than are men students. While 236,902, or 64.5 per cent, more men than women were enrolled in universities, colleges, and professional schools in 1929-30, the increase in the number of women students during the decade was proportionately very much greater than that for men students. The percentage of increase for the women was 95.8, while for men it was 75.8. When preparatory students are eliminated, and only students of collegiate and professional grade considered, the percentages of increase for the decade are: For women, 108.7; for men, 94.9; for both sexes, 99.9. Only in professional departments was the percentage of increase for men students greater than that for women students. In collegiate departments the number of men students increased 108.8 per cent, while the number of women students increased 142.3 per cent; in graduate departments the number of men students increased 195.5 per cent, while the number of women students increased 214 per cent. The percentage of increase for men in professional departments was 74, while for women it was 37.

Although the number of women students increased so largely during the decade 1919-20 to 1929-30, men still form much the greater part of the college population. In the last year of the decade 64.5 per cent more men than women were enrolled. In preparatory departments there were 43 per cent more men than women; in collegiate departments, 42 per cent more; in graduate departments, 60 per cent more; in professional departments, 1,665.7 per cent more; and in unclassified or special departments, 11.9 per cent more.

These facts are summarized in tabular form below:

	Enrollment					Percentage enrollments of men greater than women students, 1929-30
	Percentage of increase or decrease, 1919-20 to 1929-30					
	Increase			Decrease		
	Men	Women	Total	Men	Women	
Universities, colleges, and professional schools	75.8	95.8	86.2			61.5
Preparatory departments				27.7	6.5	43.0
Collegiate departments	106.8	142.3	121.0			42.0
Graduate departments	195.5	214.0	202.6			60.0
Professional departments	74.0	37.0	71.6			1,665.7
Unclassified or special				42.1	62.9	11.9

The enrollment figures for the decade 1919-20 to 1929-30 do not indicate that women are preparing to enter the professions in very large numbers. There was an actual decline of 86, or nearly 50 per cent, in the number of women preparing to enter the practice of dentistry. In all other professions there were very slight increases, except in the case of law, where the increase, although small in actual numbers, was almost 90 per cent, or a little less than the percentage of increase for men, which approximated 100 per cent. Even in study for the legal profession, however, the men outnumbered the women 17.6 to 1.

Among the professional schools, colleges of pharmacy showed the greatest increase in enrollment during the past 10 years, the number of students in the colleges having more than doubled during the period. Higher requirements for admission to the study of pharmacy have not been generally adopted. The fact that only high-school graduation is usually required for entrance may account in some measure for the growth in the number of pharmacy schools from 53 in 1919-20 to 67 in 1929-30, and the very large increase in enrollments, from 5,026 to 10,906 during this period. Notwithstanding the adoption by the American Bar Association during the 10-year period, 1919-20 to 1929-30, of the requirement of two years of college work for admission to recognized schools of law, enrollments in these schools almost doubled. There are many schools which do not meet the American Bar Association standards, but because the requirements for admission to the practice of law in many of the States have not been raised to include the higher standards these schools continue to draw a goodly number of students. While 107 schools of law reported 20,992 students in 1919-20, 136 schools reported 41,426 students in 1929-30.

The next largest increase in enrollments in professional schools during the decade 1919-20 to 1929-30 was in the theological schools.

In 1929-30 these schools enrolled 13,074 students, a number which exceeded by 5,858, or 81 per cent, the enrollment in 1919-20. Fifty-five more schools of theology reported in 1929-30 than in 1919-20.

Although the requirements for entrance to acceptable medical schools were advanced in 1918 to include two years of college work, the enrollment in medical schools increased 54.2 per cent during the decade. Whereas 14,242 students were enrolled in 77 of these institutions in 1919-20, 21,964 were enrolled in 74 institutions in 1929-30. This is the largest number of students taking medical courses in any year since the sharp decline in medical enrollments took place as a result of the campaign waged by the American Medical Association for higher standards in medical education more than 25 years ago.

Enrollments in dental schools and schools of veterinary medicine declined during the decade 1919-20 to 1929-30. In the case of dental schools the decline was undoubtedly due to the general raising during this period of the standards of dental education by lengthening the dental course and advancing the entrance requirements. In the case of veterinary colleges it was largely, if not altogether, due to the closing of several of these institutions. In each case the decrease was slight—dental enrollments dropped from 8,809 in 1919-20 to 8,162 in 1929-30; veterinary enrollments dropped from 908 to 884. There were 15 colleges of veterinary medicine in 1919-20 and but 11 in 1929-30, 10 colleges reporting for the latter year.

In actual numbers the largest increase in enrollments in any special field of study was in engineering. In 1919-20 there were 51,908 students in engineering courses; in 1929-30 there were 74,000, an increase of 22,092, or 42.6 per cent. This increase was due in large part to the addition by the institutions of newer engineering specialties, such as administrative engineering, aeronautic engineering, commercial engineering, industrial engineering, and petroleum engineering, rather than to any large increase in the basic engineering courses. In electrical engineering only, where the enrollments increased from 9,469 to 15,647, or 65.2 per cent, was there any very large increase in the enrollments in the older engineering fields. In general engineering and in mechanical, mining, ceramic, and textile engineering the enrollments decreased. The following table shows the enrollments in the several older engineering fields for the years 1919-20 and 1929-30. In the table the terms "unclassified" and "other" include a number of special fields offered by a few institutions and enrolling in each case only a small number of students.

Engineering	Enrollment	
	1919-20	1929-30
General	10,231	8,506
Chemical	5,743	6,474
Civil	8,850	11,563
Electrical	9,469	15,647
Mechanical	11,789	11,597
Mining	3,048	1,439

Architectural	365	1,446
Ceramic	161	46
Agricultural	188	372
Industrial	233	504
Textile	475	127
Unclassified		9,116
Other	1,176	6,861
Total	51,908	74,000

SUMMER SESSIONS, SHORT WINTER COURSES, EXTENSION AND CORRESPONDENCE COURSES

Summer session, extension, and correspondence study courses made great strides in enrollment in the 10-year period 1919-20 to 1929-30. The inclusion in the summer-session programs of degree credit courses in nearly all departments of study and the addition of many new and attractive features, such as travel courses and summer camps, have served to augment greatly the number of students attending summer sessions during the past 10 years. In 1919, the enrollments in summer schools was 94,838; in 1929 it was 249,399, an increase of 155,061, or 163.5 per cent. The summer session is the only division of university and collegework in which the enrollment of women exceeds that of men. The very large number of women released from elementary school teaching in the summer who take courses in preparation for higher grades of certificates accounts in part for the heavy enrollment of women in summer sessions. In 1919, there were 21,900 more women than there were men enrolled in summer schools, and in 1929, there were 58,257 more.

The growing tendency of colleges to offer credit for extension and correspondence study courses doubtless was responsible, in the main, for the large increase in these divisions during the decade. In extension courses enrollments increased 179.2 per cent—from 70,031 in 1919-20 to 125,549 in 1929-30. In the earlier year there were 15,927 men, 19,846 women, and 34,258 who were not separated as to sex reported as taking extension courses. The latter figure renders it impossible to say whether more men than women were taking extension courses in 1919-20, but in 1929-30 the men numbered 105,386, and the women 90,163.

Correspondence study showed the largest increase in enrollments of any division of university and college work during the decade 1919-20 to 1929-30. While in 1919-20 there were but 9,343 persons, 4,545 men and 4,798 women, taking correspondence courses, in 1929-

30 there were 88,417 persons, 48,437 men and 39,980 women, an increase of 79,074, or 846.3 per cent. During the earlier year the enrollment of women in correspondence courses exceeded that of men by 253; during the later year it fell short of the enrollment of men by 8,457.

The number of students in short winter courses increased but slightly in the 10 years; in 1919-20 there were 9,240 students enrolled in these courses; in 1929-30 there were 10,078 an increase of only 838. While 575 fewer men took short winter courses in 1929-30 than in 1919-20, 1,413 more women were enrolled in these courses in 1929-30 than in 1919-20.

Comparison of the enrollments in summer session, extension, correspondence, and short winter courses for 1919-20 with enrollments for 1929-30 is summarized below:

	Enrollment					Increase in 1929-30 over 1919-20
	1919-20		1929-30			
	Men	Women	Men	Women		
Summer sessions (1919 and 1929)	36,469	58,369	95,821	154,078	155,061	100
Extension	15,927	19,846	105,380	90,163	125,538	139
Correspondence courses	4,541	4,798	48,437	39,980	79,074	846
Short winter courses	7,546	1,694	6,971	3,107	838	9

^a And 34,258, sex unknown.

TEACHING STAFFS

In 1929-30 the total teaching staffs of universities, colleges, and professional schools reporting numbered 71,722 persons, 55,861 men and 15,861 women; in 1919-20 they numbered 42,882 persons, 34,111 men and 8,771 women. The increase for the 10-year period was therefore 28,840, or 67.2 per cent. In the earlier year there were 3.8 times as many men as there were women employed on college faculties; in 1929-30, the proportion of men to women had dropped to 3.5. In other words, in 1919-20 women formed but 20.5 per cent of the teaching staffs of higher institutions, while in 1929-30 they formed 22.1 per cent.

Of the 71,722 members of teaching staffs in 1929-30, there were 25,780 employed in publicly supported institutions and 45,942 in privately supported institutions. In the publicly supported institutions there were 20,261 men and 5,519 women instructors, or about 3.6 times as many men as women. In the privately supported institutions there were 35,600 men and 10,342 women instructors, or about 3.4 times as many men as women. The reason for the slightly larger proportion of women on faculties in privately supported institutions is, of course, the relatively large number of colleges for women among the privately supported institutions. In all departments—

preparatory, collegiate, and professional—the percentage of women on faculties in both publicly and privately supported institutions showed an increase in 1929-30 over 1919-20. In preparatory departments the percentage of women increased 7.8 points, in collegiate departments 3.6 points and in professional departments 1.1 points.

The following summary shows, for the years 1919-20 and 1929-30 a comparison of professors and instructors in universities, colleges, and professional schools, and the proportion of men to women instructors:

	Teaching staff							
	1919-20		1929-30		Total increase in 1929-30 over 1919-20		Proportion of men to women	
	Men	Women	Men	Women	Num- ber	Per cent	1919-20	1929-30
All institutions.....	34,111	8,771	55,861	15,861	28,840	67.2	3.8	3.5
Publicly controlled institutions.....	12,364	2,514	20,261	5,519	10,902	180.0	14.9	3.6
Privately controlled institutions.....	21,747	6,257	35,600	10,342	17,938	64.1	3.5	3.4

† Calculated from Office of Education Bulletin, 1929 No. 29, pp. 309-383 (Table 23).

The statistics of student enrollment and of faculty personnel for 1919-20 and 1929-30 show that college classes are increasing in size, or the faculty members are teaching more classes each. In 1929-30 there were 449,830, or 86.2 per cent more students enrolled in institutions of higher learning than there were 1919-20. On the other hand, there were 28,840, or only 67.2 per cent more instructors in these institutions during the later year than the earlier. In other words, while in 1919-20 there was one teacher to every 12.1 students, in 1929-30 the number of students per teacher had grown to 13.5.

DEGREES

In 1929-30 universities, colleges, and professional schools conferred 128,243 degrees, 80,699 of which they conferred on men and 47,544 on women. Of the total number of degrees conferred, 91,623 were bachelor's, 16,832 graduate, and 19,788 professional degrees, distributed as follows: Bachelor's degrees conferred on men, 51,160, on women, 40,463; graduate degrees conferred on men, 10,693, on women, 6,139; professional degrees conferred on men, 18,846, on women, 942.

The proportion of the degrees conferred in the arts and sciences indicates that students are still pursuing courses that lead to these degrees in greater numbers than in all other courses combined, although comparison with the figures for 1919-20 shows that the proportion is declining. Of the total number of first degrees conferred in 1929-30 there were 63.3 per cent in the arts and sciences; of the total number of first degrees conferred on men, 58.8 per cent were

in the arts and sciences; of the total number conferred on women, 69.1 were in the arts and sciences. In contrast with these figures the figures for 1919-20 show that 71.6 per cent of the first degrees conferred were in the arts and sciences; that 62.2 per cent of those conferred on men were in the arts and sciences; and that 85.8 per cent of those conferred on women were in the arts and sciences. The following statement shows these figures in tabular form:

Percentage which first degrees in arts and sciences are of all first degrees conferred

Percentage, 1919-20			Percentage, 1929-30		
Men	Women	Total	Men	Women	Total
62.2	85.8	71.6	58.8	69.1	63.3

While certain comparisons in numbers of degrees conferred will be made between the figures for 1919-20 and those for 1929-30, it must be remembered that these figures for the earlier date were greatly affected by the war. This is especially true of curricula for men.

The number of undergraduate degrees in only two special fields—commerce and education—showed any very large increase during the decade 1919-20 to 1929-30. In commerce the number of first degrees increased from 1,559 in 1919-20 to 6,213 in 1929-30; in education they increased from 797 to 9,054. Both of these increases are influenced greatly by the tendency to designate specialization in these fields by a separate degree to a larger extent in 1930 than was true in 1920. Several other fields in which the increase was relatively large are electrical engineering, music, and home economics. In electrical engineering the first degrees conferred increased from 931 in 1919-20 to 2,427 in 1929-30. In music the degrees increased for men from 31 in 1919-20 to 194 in 1929-30; for women they increased from 356 for the earlier year to 1,153 for the later year. In home economics 862 first degrees were conferred on women in 1919-20; in 1929-30 the number had increased to 2,260. In agriculture, general engineering, and mining engineering the number of first degrees actually decreased during the decade. In agriculture they decreased from 2,129 in 1919-20 to 1,958 in 1929-30; in general engineering they decreased from 732 to 79; and in mining engineering from 269 to 235.

Although the number of first degrees conferred by institutions of higher learning increased 137.6 per cent in the decade 1919-20 to 1929-30, the increase in the number of graduate degrees conferred for the same period was proportionately much greater, an increase in which graduate degrees conferred upon women played a considerable part. The total increase in the number of graduate degrees conferred was 246.8 per cent; for men the increase was 209.3 per cent; for women it was 354 per cent.

The increase for the decade in the number of professional degrees conferred was less than that for either bachelor's or graduate degrees. In 1919-20 there were 8,774 professional degrees conferred; in 1929-30 there were 19,788 conferred, an increase of 125.5 per cent.

Not including engineering and education, the largest number of professional degrees conferred in 1929-30 and likewise the largest increase in the number conferred in that year over the year 1919-20 was in the field of law. The number of law degrees conferred in 1919-20 was 3,273, of which men received 3,094 and women 179; the number conferred in 1929-30 was 8,874, of which men received 8,464 and women 410. The total number of law degrees conferred in 1929-30 showed an increase over the number conferred in 1919-20 of 171.1 per cent; for men the increase was 173.6 per cent; for women it was approximately 130 per cent.

Comparison of the statistics for 1929-30 with those for 1919-20 shows that the number of college students in all departments who continue on to graduation is increasing. The following table shows for the years 1919-20 and 1929-30 a comparison of the total number of students enrolled in universities, colleges, and professional schools with the total number of undergraduate degrees conferred, and a comparison of the number of students enrolled in collegiate, graduate, and professional departments with the number of degrees conferred in each of these departments.

Department	1919-20			1929-30		
	Number of students	Number of degrees conferred	Percentage of students receiving degrees	Number of students	Number of degrees conferred	Percentage of students receiving degrees
All departments.....	521,754	52,179	10.0	971,584	128,243	13.2
Collegiate.....	341,182	38,552	11.3	753,827	91,623	12.1
Graduate.....	15,612	4,853	31.0	47,255	16,832	35.6
Professional.....	57,131	8,774	15.4	98,041	19,788	20.0

¹ Includes preparatory and special students.

In 1929-30 there were 2,024 Ph.D. degrees conferred; 1,692 on men and 332 on women. In 1919-20 there were 532 Ph.D. degrees conferred; 439 on men, and 93 on women; the increase for the decade being 1,492, or 280 per cent. It is noteworthy that while five times as many men as women were awarded this degree, the percentage of increase during the decade in the number of men who received it was 285.4, and the percentage of increase during the decade in the number of women who received it was 257. Thus the ratio of men, to women who are awarded the Ph.D. degree is growing greater.

RECEIPTS

The amount of income received by institutions of higher learning in 1929-30 shows an increase of \$390,988,383, or 162.3 per cent, over the income received by the institutions in 1919-20. Every item of income from which the institutions receive support shows an increase of more than 100 per cent, except the income received from the Federal Government, for which the increase was 59.1 per cent. In 1919-20 the income from this source was \$12,782,944; in 1929-30 it was \$20,338,597. The income from productive funds increased from \$26,165,860 to \$67,370,057, or 157.5 per cent; the income from States and cities increased from \$52,821,194 to \$133,179,356, or 152.1 per cent; the income from private benefactions increased from \$65,286,159 to \$139,508,922, or 113.7 per cent; while the income from student fees, including tuition and other educational services and room and board, increased from \$83,085,837 to \$270,733,445, or 225.8 per cent.

The proportion of the total income of universities, colleges, and professional schools received by the publicly and by the privately supported institutions varied but slightly in the decade 1919-20 to 1929-30. Of the total income of the institutions in 1919-20, the 109 publicly supported institutions received 38 per cent, and the 561 privately supported institutions 62 per cent; of the total income in 1929-30, the 246 publicly supported institutions received 37.2 per cent, and the 832 privately supported institutions received 62.8 per cent.

The above figures on income are summarized below:

Sources of income	Income		
	1919-20	1929-30	Percentage of increase
Productive funds.....	\$26,165,860	\$67,370,057	157.5
Federal Government.....	12,782,944	20,338,597	59.1
States and cities.....	52,821,194	133,179,356	152.1
Private benefactions.....	65,286,159	139,508,922	113.7
Student fees.....	83,085,837	270,733,445	225.8
Total.....	240,141,994	631,130,377	162.8
Publicly controlled institutions.....	91,304,185	234,934,148	157.3
Privately controlled institutions.....	148,837,809	396,196,229	166.2

Sources of income	1919-20				1929-30				Increase in percent- age 1929-30 over 1919-20		Decrease in percent- age 1929-30 from 1919-20	
	Publicly supported institutions		Privately supported institutions		Publicly supported institutions		Privately supported institutions		Publicly supported institu- tions	Privately supported institu- tions	Publicly supported institu- tions	Privately supported institu- tions

The percentages of income from the several sources from which the institutions receive their support varied little in the year 1929-30 from those of 1919-20. From productive funds, in 1929-30 the publicly supported institutions derived 1 per cent less of their income than they did in 1919-20, while the privately supported institutions derived 0.1 per cent more from this source than in 1919-20. From the United States Government, State, or city the percentages of income for both publicly and privately supported institutions decreased, for the former 6 points, for the latter, 0.4 of a point. The percentage of income from private benefactions made to publicly supported institutions increased 1.7 points, while that for privately supported institutions decreased 9.6 points. The income from student fees and miscellaneous sources increased more than the income from any of the other sources of higher institutional support. For publicly supported institutions the percentage increase was 5.4 points; for privately supported institutions, 9.9 points. The summary on page 16 shows the percentage of income received from the various sources by publicly and privately supported institutions for the years 1919-20 and 1929-30, and the percentage of increase or decrease from each source.

PROPERTY

The total value of the property of universities, colleges, and professional schools increased greatly during the decade 1919-20 to 1929-30. At the earlier date it was \$1,202,880,547, at the later \$3,280,054,245, an increase of \$2,077,173,698, or 172.7 per cent. Individual categories of property increased in value as follows: Libraries, scientific apparatus, machinery, and furniture, from \$110,847,727 to \$243,297,004, or 119.5 per cent; grounds, from \$110,555,552 to \$274,545,550, or 148.3 per cent; buildings, from \$425,127,123 to \$1,205,188,633, or 183.5 per cent; productive funds, from \$556,350,145 to \$1,347,675,733, or 142.2 per cent. The value of all property other than the items mentioned was, in 1929-30, \$139,954,183. There is no basis for comparison for this item, as no similar item was reported in the 1919-20 statistics.

An increase of importance in the property of universities, colleges, and professional schools during the decade 1919-20 to 1929-30 was in the number of books added to the libraries of these institutions. In the 10 years 20,205,218 volumes were added to college libraries. In 1919-20 these libraries contained 24,191,204 volumes; in 1929-30 they contained 44,396,422 volumes, an increase of 83.5 per cent.

Of importance also is the increase in dormitory facilities provided for students. The value of college dormitories almost trebled during the decade 1919-20 to 1929-30. In the earlier year college dormitories were valued at \$69,393,143, in the later year at \$198,369,312, an increase of \$128,976,169, or 185.9 per cent.

The following summary shows the value of the property of institutions of higher learning in 1919-20 and in 1929-30, and the percentage of increase for the decade:

	Property value		
	1919-20	1929-30	Percentage of increase
Libraries, scientific apparatus, machinery, and furniture	\$110,847,727	\$243,297,004	119.5
Grounds	110,555,552	274,545,550	148.3
Buildings	425,127,123	1,205,188,643	183.5
Productive funds	556,350,145	1,347,675,733	142.2
All other property		139,954,183	
Total	1,302,880,547	3,280,654,245	151.7

A special account of the data for the land-grant colleges and universities is given with the section of this report dealing with these institutions. This report begins on page 590.

II. EXPENDITURES

By HENRY G. BADGER

Assistant Statistician

There is manifest over the country a growing interest in expenditures in higher education. This is due to a number of causes, among which are the increasing number of educated people in the United States and the increasing amount of research in education of all types and levels.

Two questions frequently asked are: How much money is spent for higher education in the United States? and How is it spent?

The present study is an attempt to answer these questions, within the limitations of the data available to the Office of Education.

LIMITATIONS OF THE PROBLEM

These limitations appear to hinge quite largely on the fact that financial accounting for institutions of higher education is still a new science, as yet hardly removed from the pioneering stage.

1. One of the first facts limiting the use that can be made of the data in possession of the Office of Education is that there is as yet no standard, universally accepted system of financial reporting for institutions of higher learning.¹ For example, in 1928 one institution accounted for more than \$150,000 by means of a report of 8 items, 3 of which were subtotals. The same year another institution published a report itemized under approximately 65 headings. As late as 1930 one other institution accounted for more than a million dollars of expenditure in a report of 2 items. Many States and educational foundations call for reports of some sort from the universities, colleges, and professional schools under their patronage. Many different varieties of reports are presented. In some a balance sheet appears, presumably accounting for every cent committed to the care of the financial officers; in others a balance sheet is presented for some of the accounts and omitted for others; some institutions publish no balance sheet. In some reports the major division of expenditures is by school

¹ In 1930 there was organized the National Committee on Standard Reports for Institutions of Higher Education, including representatives of the Association of University and College Business Officers of the Eastern States, the Southern Educational Buyers and Business Officers Association, the Association of University and College Business Officers (Middle West and Western), the Business Officers of Pacific Coast Universities and Colleges, the Association of American Colleges, the Council of Church Boards of Education, the American Association of Collegiate Registrars, and the American Association of Teachers of Colleges. The General Education Board and the United States Office of Education are cooperating with this committee, which is under the chairmanship of Comptroller Lloyd Morey, of the University of Illinois. The committee has issued three bulletins, entitled, respectively, "A Study of Financial Reports of Colleges and Universities in the United States," "Suggested Forms for Financial Reports of Colleges and Universities," and "Illustrations of the Use of Financial Report Forms Recommended by the Committee." Correspondence received in this office indicates that many institutions are remodeling their financial reporting systems in accordance with the general principles suggested by this committee.

(arts and sciences, law, graduate, etc.), in others by function (administration, instruction, etc.), and in still others by source of fund (State appropriation, private foundation or donation, student fees, etc.). Items appearing as control accounts in some reports appear as sub-accounts in others. So far no single system of financial reporting has been adopted in enough institutions of higher education to make a nation-wide study accurate in all details, major and minor.

The bookkeeping systems followed in universities, colleges, and professional schools appear to be of the two following general types:

(a) A profit-and-loss system, analogous to the bookkeeping systems employed by commercial concerns. Here the emphasis is apparently on whether a branch or department of the institution is operating at a financial profit or loss.

(b) A nonprofit system, set up by persons interested in and acquainted with both accounting and educational procedure and ideals, with special reference to the nonprofit-producing functions of an educational institution, and designed to show something of costs (not necessarily for profit-estimating purposes) and facilitate a just and equitable budgeting of funds among the several phases of educational activity carried on in the institution.

2. Another condition which greatly limits the accuracy and adequacy of any study of this nature lies in the fact that there is as yet no unanimity of opinion among the financial officers of our educational institutions as to what the various accounting terms themselves mean. We do not yet have complete standardization of accounting nomenclature for institutions of higher learning. One institution interprets the title "Operation" as meaning all the expense incident to conducting the various activities of the institution and includes under it salaries of president, deans, professors, and janitors, purchase of books for the library, and even food for the dining halls; another restricts the term to the operation of the physical plant, charging the president's salary to "Administration," professors' salaries to "Instruction," and so on. In some institutions salaries of physical directors are charged to "Instruction"; in others, to "Athletics." Deans' salaries are in some instances charged to "Administration," and in others to "Instruction," or even "Operation." Accounts for dormitories, dining halls, athletics, college bookstores, and college post offices are reported as net in some institutions, profit or loss appearing according to the facts in the case; in other schools the gross receipts and disbursements are reported. Student hospitals are sometimes found charged to "Supplementary operations" and sometimes to "Medical schools." Miscellaneous accounts are found in several reports.

3. Since there is apparent such diversity of practice with respect to the form and content of a financial report of an institution of

higher learning, it is not surprising that there are sometimes great differences between the report of an institution to its controlling board and the report of that same institution to the United States Office of Education. These differences, of course, do not indicate any alarming conditions with regard to the integrity of the officials preparing the reports. They merely reflect the different types of information asked for by the various organizations concerned, or the different uses to be made of the information. A report prepared for the primary purpose of accounting for all money spent, for instance, would not of necessity call for the same information as one which is wanted for determination of general policy.

4. Closely related to the limitations already described and probably hinging directly on them is a reluctance on the part of some educational authorities to furnish data regarding their financial operations. There has been and still is in some localities a feeling that while figures representing administrative and teaching staff, students, and perhaps property, may safely be made public, those on financial operations are not to be released and thereby made liable to misinterpretation.

5. The conditions just described may explain in part the fact that up to the present time no study of the expenditures of all universities, colleges, and professional schools has been made public. From time to time attempts have been made to ascertain costs in a group of institutions of one type or another, but in the last analysis these reports have always had to be understood by each individual student in the light of his own experience, his own opinions, or his own interpretation of the terminology used. Probably the most extensive studies of this character are those of the 69 so-called "land-grant" universities and colleges, made annually by the Office of Education since 1925,¹ and a similar study² of expenditures of State universities and State colleges, made by this office on the basis of reports for the fiscal year ending June 30, 1925.

6. While the figures here presented afford opportunity for comparison of institutions on the basis of public versus private control, it should not be concluded that this is the only or even the most important basis of comparison. Number of students enrolled, type, and educational level of work offered, geographical situation, administrative policy, and various other factors undoubtedly exert a considerable influence on the distribution of expenditures of individual institutions.

7. Finally, this report does not include the details of every institution of higher education in this country. The total number of

¹ Bureau (Office) of Education, Bulletins: 1925, No. 44; 1927, No. 37; 1928, No. 14; 1929, No. 13; 1930, No. 26; Higher Education Circular No. 32, September, 1929.

such institutions reporting to this office for 1929-30 is 1,417, divided as follows:

Location	Universities, colleges, and professional schools	Teachers colleges and normal schools	Total
Continental United States	1,078	333	1,411
Outlying parts of the United States	4	2	6
Total	1,082	335	1,417

Except for comparative summaries, this report is concerned only with the institutions which offer courses in liberal arts, graduate or professional work, excluding those institutions whose primary purpose is the training of teachers. Institutions of the latter type are included in another publication of this office.³

The data here reported were secured by means of blanks sent out to all the 1,082 universities, colleges, and professional schools in the United States and its outlying parts. The replies were received partly by mail and partly through personal visitation of representatives of this office. Reports of expenditures were received from a total of 1,044 institutions in continental United States and all the 4 institutions in outlying parts. From this it will be seen that approximately 97 per cent of all institutions of this type on record are included in this study. Most of the reports used are for 1930, although in a few instances it was necessary to use data for 1928, 1929, or 1931.

The expenditure report blanks used are reproduced in Forms I and II.

NOTE.—Do NOT report CENTS; give nearest DOLLAR.

EXPLANATION OF SCHEDULE

Column I. Grand total is the total across, of columns II, III, IV, and V.

Column II. Salaries and wages includes salaries of regular instructional, scientific, and administrative staffs, together with the wages of mechanical, farm, and temporary employees, for operation and maintenance.

Column III. Materials, supplies, and other expenses includes expenditures for materials, supplies, freight, travel, repairs, etc., for operation and maintenance.

Column IV. Capital outlay for equipment includes all expenditures for departmental equipment, such as furniture, books, apparatus, machinery, livestock, museum, illustrative specimens, etc., for permanent use.

Column V. Capital outlay for land and buildings includes all expenditures for land, improvements on land, buildings, and additions or betterments to existing buildings which are improvements. Do not include repairs.

Item 1. Administration and general includes expenses of administration, general offices, general departments, and expenses not directly connected with instruction. Do not include libraries or physical plant.

Item 2. Resident teaching includes all expenses directly connected with instruction in the departments, physical education, and military training. Include salaries of the college deans, and other administrative expenses of the educational departments.

Item 3. General library includes all expenses incident to the operation of and the purchase of books, magazines, etc., for the university libraries.

Item 4. Extension includes all extension service and correspondence courses.

Item 5. Experiment station and research includes expenses of the agricultural experiment stations, engineering experiment stations, and other research which is separately budgeted and reported. If research is reported under Resident teaching a note should be made to that effect.

Item 6. Physical plant operation and maintenance includes heat, light, water, upkeep of buildings and grounds, power, janitor service, police service, supplies, repairs, etc. Do not include self-supporting enterprises, such as dormitories, dining halls, etc.

Item 7. Supplementary operations includes bookstores, student hospitals, stores and service departments.

Item 8. Dormitories and dining halls includes all expense of operation, maintenance, and capital outlay.

Item 9. Athletics includes all expense of operation, maintenance, and capital outlay if handled by the university.

Item 10. Medical school hospitals includes medical school hospitals, if any, but not student hospitals. Include the operation of the hospital physical plant.

Item 11. Physical plant extensions includes all outlays for land, buildings, and land improvements.

Item 12. Trust funds includes all expenditures for noneducational purposes from trust funds, such as fellowships, scholarships, student loans, etc. Exclude investment transactions.

FORM II. EXPENDITURES FOR THE YEAR 1929-30, PRIVATELY CONTROLLED UNIVERSITIES, COLLEGES, AND PROFESSIONAL SCHOOLS, AND PUBLICLY CONTROLLED JUNIOR COLLEGES

17. Administration and general control:
 Salaries of officers and nonteaching deans.....
 Other expenses of officers not directly connected with instruction.....
18. Resident instruction:
 Salaries of teaching staff, including teaching deans.....
 Other expenses of teaching staff.....
 Textbooks, supplies, and other expenses of instruction.....
19. General library (operation and maintenance, including salaries).....
20. Extension (include all extension service and correspondence courses).....
21. Organized research (separately budgeted).....
22. Operation of physical plant (do not include dormitories and other self-supporting enterprises):
 Salaries of all building and grounds employees.....
 Expended for heat, light, water, power, and supplies.....
23. Maintenance of physical plant (cost of upkeep, repairs, and replacements).....
24. Dormitories and dining room halls (include all expenses).....
25. Supplementary operations (include bookstores, student hospitals, etc.).....
26. Athletics (include all expense if handled by the college).....
27. Medical school hospitals (include also operation of hospital physical plant).....
28. Fixed charges (rent, insurance, taxes, pensions, interest, etc.).....
 Total current expenditures for the year.....
29. Capital outlay:
 For grounds and improvements of site.....
 For buildings and other permanent improvements.....
 For equipment, furnishings, apparatus, library books, etc.....
30. Trust funds: all expenditures from trust funds, such as fellowships, scholarships, student loan. Exclude investment transactions.....
 Grand total expenditures for the year.....

HALF A BILLION FOR HIGHER EDUCATION

The grand total of expenditures for all purposes reported by universities, colleges, and professional schools in continental United States in 1930 is shown in the table below to be \$563,547,070.

Grand total expenditures for all purposes, universities, colleges, and professional schools, including teacher-training institutions, in all parts of the United States, 1930

Item	Expenditures			
	Educational ¹ and general	Capital outlay ²	Other items ³	Total
1	2	3	4	5
In continental United States:				
Universities, colleges, and professional schools.....	\$302,807,079	\$109,645,494	\$151,094,497	\$563,547,070
Teachers colleges and normal schools.....	49,475,195	13,460,914	3,765,607	68,701,716
Total.....	352,282,274	123,106,408	154,860,104	630,248,786
In outlying parts:				
Universities, colleges, and professional schools.....	1,039,991	170,055	193,076	2,304,022
Teachers colleges and normal schools.....	150,887	123,470	6,710	281,067
Total.....	2,090,878	293,525	200,686	2,585,089
In all parts of the United States:				
Universities, colleges, and professional schools.....	304,747,070	109,815,549	151,283,473	565,851,092
Teachers colleges and normal schools.....	49,626,082	13,584,384	3,772,317	68,982,783
Grand total.....	354,373,152	123,399,933	155,055,790	632,828,875

¹ This is an accounting phrase. As used throughout this paper it includes the following items: Administration and general control, physical plant operation and maintenance, resident instruction, libraries, and organized research.

² Includes all expenditures for extension of the buildings, campuses, and farms, and increase of the material equipment (except endowment funds).

³ See page 533 for explanation of this item.

From this table it will be seen readily that payments for all purposes whatsoever by all educational institutions of collegiate grade in all parts of the United States which reported on their 1930 activities reached a total of more than \$600,000,000. This figure, however, includes some duplications as well as payments for noneducational and fiscal purposes, as is shown in the discussion of other items on page 213, and is therefore not to be taken as an accurate measure of educational costs. The totals shown in the column headed "Educational and general" are probably more reliable for this purpose. The figures in the next column represent all outlays for extension of the physical plant and equipment of the institutions reporting. These two columns give a total of \$479,773,085, or slightly less than half a billion dollars for current expenses and outlays for all types of higher education in all parts of the United States in 1930.

The figures dealing with universities, colleges, and professional schools in continental United States, leading to the total of \$563,547,070, are those with whose analysis the present study is concerned. Of this amount, \$302,807,079 went for educational and general purposes, \$109,645,494 for capital outlay, and \$151,094,497 for other items.

Table 14 shows that administration and general control (Form I, Columns II and III of item 1; Form II, item 17) represented an expenditure of \$38,168,049. This includes such items as salaries and expenses of boards of trustees and directors, presidents, registrars, treasurers, and other nonteaching officers, and other expenses incident to control and management of the institutions.

Physical plant operation and maintenance (Form I, Columns II and III of item 6; Form II, items 22 and 23) cost \$45,943,100. This includes salaries and wages of janitors, firemen, guards, watchmen, and repairmen, as well as consumption of fuel, water, gas, electricity, and other supplies and materials necessary to repairs and replacement of equipment, operation, care and maintenance of buildings and grounds, property insurance, and similar items.

Resident instruction, including salaries, classroom supplies, and other expenses of faculty and teaching assistants (Form I, Columns II and III of item 2; Form II, all parts of item 18) represented an expenditure of \$191,066,825. As might be expected, this is the largest single item of expenditure.

Expenditures for the operation and maintenance of libraries (Form I, Columns II and III of item 3; Form II, item 19) amounted to \$9,621,558. In a few instances this amount includes the purchase of new books, but the amount of such inclusion is believed to be practically negligible.

Organized research, separately budgeted (Form I, Columns II and III of item 5; Form II, item 21), entailed an expenditure of \$18,007,-

547. This does not include research work done on many campuses which is not segregated in the budget, even though such work may be handled by an organization set up especially for that purpose. Of the \$13,511,576 expended under this head by institutions under public control a large proportion was used for experiment stations in agriculture and engineering and in other federally stimulated activities. The exact amount so used can not be stated with any degree of confidence; it is probably about twelve or thirteen million dollars. No public junior colleges reported an expenditure for research in 1930, although two reported a small amount in 1928. One private junior college reported an expenditure of \$20,715 for this purpose in 1930.

Of the \$109,645,494 expended for capital outlay, \$93,674,726 was used for extension of the buildings, campuses, and farms; \$15,970,768 was invested in new equipment, furniture, scientific apparatus, library books, etc. The figures entering into these totals are taken from the totals of Columns IV and V in Form I and the three parts of item 29 in Form II.

The \$151,094,497 charged off for other items represents a number of payments. It is derived from a combination of Columns II and III of items 4, 7, 8, 9, 10, and 13 of Form I, and items 20, 24, 25, 26, 27, 28, and 30 of Form II. This includes extension, bookstores, student hospitals, dormitories, dining halls, athletics, and other auxiliary activities, medical-school hospitals, payment of fellowships, scholarships, loans to students, rent, insurance, taxes, pensions, interest, and the like, as well as such items as miscellaneous, repayment of loans, payment of annuities, transfers of current funds to endowment capital, and other fiscal and purely investment transactions. Since in many cases money loaned to students was returned by them to the college treasuries in the form of student fees and was then reexpended for administration, instruction, and other educational and general purposes, the likelihood of duplication in this account is obvious. Furthermore, when institutions reported only their total expenditures without itemizing them, and in the few cases where only total receipts were given instead of expenditures, those figures were entered here. The amount of unitemized totals thus entered is between \$3,500,000 and \$4,000,000.

From this it is clear that the total of educational and general expenditures and that of capital outlay are undoubtedly more accurate and reliable than the grand total of expenditures, which in many cases merely represents the total amount passing through the books of the treasurers and in some instances unquestionably includes some duplication.

COMPARISONS, 1928 AND 1930

Expenditure data were first collected from universities, colleges, and professional schools by this office on a nation-wide basis in 1928.

Such of the 1928 data as have been tabulated are summarized in this paper for purposes of comparison with the 1930 reports. The 1928 figures on publicly controlled junior colleges are drawn from Circular No. 40 of this office; those on publicly controlled degree-granting institutions are from unpublished tabulations. No tabulations are available for 1928 for privately controlled institutions.

From Table 14 it will be seen that the total number of public institutions reporting in 1930 was 236. This is an increase of 26, or 12.4 per cent, over the number reporting in 1928. The total expenditures of these institutions increased \$23,672,161, or 11.7 per cent. For publicly controlled degree-granting institutions the percentage increases from 1928 to 1930 were 4.6 in number of institutions reporting and 11.8 in total expenditures. For public junior colleges the increases were 20.8 per cent in number reporting and 8.9 per cent in total expenditures.

EXPENDITURES IN THE DIFFERENT STATES

Tables 15, 16, and 17 give summaries of numbers and expenditures of public and private institutions in the different States. It will be noted, for example, that of the 1,044 institutions in the United States, 75 are in the single State of Texas. Other States reporting more than 50 are Pennsylvania with 61, New York with 59, California with 58, Illinois with 55, and Ohio with 52. The four States of Texas, Pennsylvania, New York, and California report a total of 253 institutions, nearly one-fourth of the entire number carried in this report. These same four States report a little more than 30 per cent of the grand total of expenditures for all institutions in the United States. This is not surprising in view of the fact that the combined population of these four States is approximately 27 per cent of that of continental United States, while that of the entire group of six States is 39 per cent of the national total.

Texas, with 4.8 per cent of the population of the United States, reports 7.2 per cent of the higher educational institutions. In striking contrast New York, with 10.3 per cent of the total population, reports only 5.6 per cent of the total number of higher educational institutions. This is, of course, a reflection of the fact that Texas reports 43 junior colleges, whereas New York reports only 1.

The greatest total of expenditures for all types of higher education is reported from New York, the amount being \$73,819,871, or 13.1 per cent of the national total of \$563,547,070. Other States reporting more than \$30,000,000 are Pennsylvania, Massachusetts, Illinois, California, and Ohio.

New York also leads in every item of expenditure except that of outlay for new equipment, where it is second to California

The six States reporting the greatest total expenditure for all educational and general purposes are, in the order named, New York, Illinois, Pennsylvania, Massachusetts, Ohio, and California. The total for these six States is only a little less than half the national total for this item, although their combined population is not quite 38 per cent of the national total. These same States lead in expenditures for resident instruction, but their order is slightly changed. Their total is again but little less than half the national total.

Five of these States again appear among the six leaders in capital outlay, Ohio giving place to Connecticut. New York, Pennsylvania, and Massachusetts report over \$10,000,000 each; Connecticut, Illinois, and California from \$8,000,000 to \$10,000,000 each.

California leads the Nation in its total expenditures for public higher education. The amount reported from that State is \$18,807,446. Michigan is next with \$15,551,585, and Ohio third with \$14,518,170. Texas reports \$11,890,814 and Minnesota \$11,337,930. No other State reports as much as \$10,000,000.

Privately controlled institutions made great expenditures in seven States. Those in New York lead with a total of \$68,658,472. Massachusetts follows with \$42,801,294, and Pennsylvania reports \$39,741,808. Illinois reports \$29,719,308. States reporting from \$15,000,000 to \$20,000,000 are Connecticut, California, and Ohio.

JUNIOR COLLEGES

Some very significant conclusions with respect to junior colleges may be drawn from these tables.

Table 17, Part II, shows a total of 269 junior colleges which rendered reports of their 1930 expenditures. This is 5.8 times the total number reporting in 1918, when statistics of junior colleges were first segregated by this office. The number reporting in 1918 was 46.

Of the 269 junior colleges reporting, 181, or 67.3 per cent, are in States lying partially or wholly west of the Mississippi River. The grand total of expenditures of these 181 institutions amounted to \$13,350,191, or 56.4 per cent of the total reported by all junior colleges here considered.

The three States of Texas, California, and Missouri report a total of 93 institutions. This is 34.6 per cent of all junior colleges reported in this study. These three States report 34.7 per cent of all expenditures for all purposes and 38.4 per cent of the expenditures for educational and general purposes. They also report 32.2 per cent of the national total given for resident instruction. Their combined population is 15,131,333, or 12.3 per cent of that of the United States. In other words, approximately one-third of the junior colleges here studied, spending roughly one-third of the total junior college budget,*

* As reported to this office. It should be remembered that not all educational institutions in the United States made reports to the Office of Education.

are located in three States, all of which lie west of the Mississippi River, and whose total population is less than one-eighth that of the United States.

Junior colleges are reported from 38 of the 48 States. Of the 10 which do not report any, 4 are in New England and 2 others are on the Atlantic Seaboard.

A casual glance at Table 14 would suggest the possibility that public junior colleges are managed and operated more cheaply than are those under private control. The entire story, however, is not set forth in these figures. Careful study and comparison of Tables 21 and 22 will reveal that the two items of administration and general control, and operation and maintenance of the physical plant received no charge in a larger proportion of public junior colleges than private ones. That is, whereas only about 75 per cent of the public junior colleges reported charges to these items, between 85 and 90 per cent of the private institutions did. It is not at all impossible that the operating of a junior college as a part of a city school system or the housing of it with a high school has a tendency to reduce its administrative and operational costs to a point where some authorities ignore them altogether. On the other hand, many of the private junior colleges here listed have secondary divisions, but do report costs under both administrative and operational as well as instructional items. This would suggest that when the types of institution are housed together or operated jointly there is an apparent tendency among public institutions to charge expenses which are not easily distributed to their secondary division, whereas among the private institutions the tendency to charge them to the junior college division is just as apparent.

The building situation, wherein the private junior colleges appear to spend far more for new buildings and grounds than do those under public control, is apparently another reflection of the tendency just mentioned with reference to administrative allocation of costs. When new buildings have been erected for the joint use of public high schools and public junior colleges, it would appear that in some instances the entire cost is charged to the high school. Again, in more than one locality a public junior college has taken over an entire high-school building, succeeding a high school which in turn has occupied a new plant. The entire capital outlay involved is likely to be charged to the high school, although there can be no doubt that the junior college has benefited by the transaction.

Table 14 also shows about four times as much charged off for other items (line 8) by private junior colleges as by those under public control. This account, it will be remembered, is made up of a number of items, such as unitemized totals, dormitories and dining halls, athletics, college bookstores, and various other items. Accordingly a

variety of explanations might be made of this great difference in proportionate charges. There are no unitemized totals in the reports from public junior colleges; four private institutions report a total of \$519,504 under this head. The other possibilities, such as comparative prevalence of dormitories and dining halls, attention paid to athletics, student health, or other activities, as between the two types of junior college, can only be mentioned, as no definite data bearing on them are available.

CLASSIFICATION OF INSTITUTIONS

Of the 1,044 institutions carried in this report, 236 are under public control; the remaining 808 are under the control of churches, educational foundations, and other private organizations. Of the 236 public institutions 122 are junior colleges; of the 808 private institutions, 147 are junior colleges.

When institutions are classified by type of control we have:

Control	Number	Per cent	Expenditures			
			Total	Per cent	Educational and general only	Per cent
Public	236	22.6	\$225,816,040	40.1	\$127,541,250	42.1
Private	808	77.4	337,731,030	59.9	175,265,820	57.9
Total	1,044	100.0	563,547,070	100.0	302,807,070	100.0

Classifying them by grade of work done we have:

Grade	Number	Per cent	Expenditures			
			Total	Per cent	Educational and general only	Per cent
Degree granting	775	74.2	\$540,067,158	95.8	\$289,716,489	95.7
Junior	269	25.8	23,479,912	4.2	13,090,580	4.3
Total	1,044	100.0	563,547,070	100.0	302,807,070	100.0

The 114 publicly controlled degree-granting institutions are for the most part comprehensive, multiple-course universities; the independent 1-course or 1-school college is comparatively rare. On the other hand, among the 661 privately controlled degree-granting institutions there may be distinguished in sufficient numbers to study intensively such institutions as the independent liberal-arts or non-professional college, either with or without a music school, the independent school of theology, of law, of engineering and technology, and the independent college of osteopathy.

PERCENTAGE ANALYSIS OF EXPENDITURES

Percentage analyses of expenditures of the institutions reporting are presented in Tables 18, 19, and 20.

In Table 18 are analyzed the current and capital expenditures of all institutions reporting, divided by type of control and grade of work done. Corresponding expenditures of public institutions in 1928 are also analyzed in this table. The amounts charged to other items (line 8 in the summary table) are ignored in this table.

This table shows that in 1930, 73.4 per cent of all expenditures analyzed went directly for educational and general purposes (items 1 to 5) and 26.6 per cent for extension of the physical plant and equipment of the institutions (items 6 and 7). The same percentages hold for all degree-granting institutions, but those for all junior colleges are 75.4 per cent for educational and general and 24.6 for capital outlay.

In Table 19 is presented an analysis of educational and general expenditures in all universities, colleges, and professional schools reporting. This table is similar to Table 18, except that it disregards capital outlay and concerns itself with only those functions which are distinctly educational, administrative, or operational in their scope.

In Table 20 are presented percentage analyses of educational and general expenditures for such independent colleges of liberal arts, theology, law, engineering and technology, and osteopathy as could readily be identified and studied. That is, institutions which granted only degrees in the subjects specified were included. A school, for instance, which offered both arts and engineering work or both arts and theology was not included. Furthermore, colleges whose faculties were on a nonsalaried or a nominal-salary basis were omitted from these calculations.

DETAILED TABLES

Detailed statistics for the individual institutions reporting are presented in Tables 21 and 22.

TABLE 14.—Summary of expenditures for all purposes—universities, colleges, and professional schools—1927-28 and 1929-30

Item	1928, public only	1930

* Personnel reported with Catholic University of America.

† Included with instruction.

‡ Includes administration.

§ Junior college.

¶ Negro.

** Estimated.

*** Data of 1928.

* Includes library.

† Includes new equipment.

‡ Included with new buildings and grounds.

III.—LAND-GRANT COLLEGES AND UNIVERSITIES

By WALTER J. GREENLEAF

Specialist in Higher Education

A SUMMARY REPORT FOR THE YEAR ENDED JUNE 30, 1930

Since 1862 the land-grant colleges and universities have been required to report annually to the Secretary of the Interior. Until 1917 summaries of these reports were included as chapters in the Annual Report of the Commissioner of Education, but since that time the annual report of the Commissioner has been replaced by the Biennial Survey of Education and separate chapters for the land-grant institutions are not included. An annual bulletin on land-grant colleges and universities has been issued since, to and including the year 1929. The last annual report was Bulletin 1930, No. 28, Land-Grant Colleges and Universities, Year Ended June 30, 1929. Hereafter this bulletin will be published biennially on the odd years, and for the even years a summary chapter such as follows will be included in the larger statistical bulletin which is published biennially on the even years.

The 69 land-grant colleges and universities as a group enroll about one out of every six college students in the United States. There is 1 land-grant institution in every State (2 in Massachusetts), in Alaska, Hawaii, and Puerto Rico, and in addition 17 land-grant colleges for Negroes in as many Southern States. These institutions receive Federal funds for their support (see Table 25, column 2) from the land-grant fund of 1862, from Morrill-Nelson appropriations (\$50,000 annually to each State and three territories), from certain other Federal funds administered through the Department of Agriculture, and from the Smith-Hughes funds administered through the Federal Board for Vocational Education.

In 22 States the State university is designated as the land-grant institution; 20 States provide a separate land-grant college in addition to a State university; 3 Territories—Alaska, Hawaii, and Puerto Rico—maintain land-grant institutions; 6 States do not provide State universities, and of these Connecticut, Massachusetts, Pennsylvania, and Rhode Island support State colleges which are designated as land-grant colleges, and Massachusetts, New Jersey, and New York have designated departments of privately-controlled institutions as land-grant colleges. Massachusetts has 2 land-grant institutions—1 for agriculture at Amherst and 1 for engineering at Cambridge.

STAFF

In 1929-30 the 52 land-grant colleges primarily or exclusively for white students (this chapter does not include the 17 land-grant colleges for Negroes) employed 26,555 men and women on their faculties. Of these 16,513 men and 4,492 women were on a full-time basis and 4,450 men and 1,100 women were on part time.

STUDENTS

The ratios of students entering different courses of study in the land-grant colleges have remained practically constant (see Tables 23-a and 23-b) over a period of five years. In 1930 of a total of 162,521 undergraduate resident students registered for degrees, about a third elected arts and sciences, a fifth engineering, a tenth education, 9 per cent agriculture, and the remainder other courses of study. In figuring percentages the base 162,521 students (100 per cent) was used—2,561 specials (1,291 men and 1,270 women) and 13,834 graduate students (9,282 men and 4,552 women) were excluded, but 3,500 names were counted twice when students were registered for more than one course. According to sex, there were two men for every woman registered—(68.8 per cent men, 31.2 per cent women).

In engineering, a fourth of the students took electrical engineering, while mechanical was second and civil third in enrollments. A total of 82 women were taking engineering courses in 25 different institutions. The arts and science group registered 53,764 students in all of the institutions except North Carolina State College, and Oregon State Agricultural College which report no separate enrollments in arts and sciences. The largest number of students were enrolled in the (1) University of California, (2) University of Minnesota, (3) University of Illinois, (4) Ohio State University, (5) University of Wisconsin, (6) University of Nebraska, (7) Cornell University, and (8) University of Missouri. These institutions enrolled practically one-half of the entire resident student body of all land-grant colleges.

DEGREES

First degrees.—Thirty per cent of all first degrees awarded were in arts and sciences, 17 per cent in engineering, 14 per cent in education, and 8.5 per cent in agriculture. Women in the numbers indicated received degrees in the following subjects (compare with Table 24-a):

Agriculture.....	43
Forestry.....	1
Home economics.....	1,551
Arts and sciences.....	3,825
Commerce and business.....	250
Architecture.....	23

Education:	
General	2,305
Vocational	119
Engineering	8
Fine arts	137
Music	114
Journalism	121
Law	22
Dentistry	4
Medicine	47
Pharmacy	60
Miscellaneous	485
Total	9,115

Advanced degrees.—A total of 3,465 master's degrees were granted in 1930. Of these, 2,040 were in arts and sciences, 455 in education, 384 in agriculture, 333 in engineering, and 253 in other subjects. Of the 717 doctor's degrees, 379 were in arts and sciences, 216 in agriculture, 16 in education, and 106 in other subjects. Advanced engineering degrees totalled 159; and 79 honorary degrees were granted by 20 different institutions.

AGRICULTURAL STUDENTS

Students studying agriculture in its various phases, and students graduating with degrees in agriculture are of special interest since the establishment of the land-grant colleges was for the purpose, in part, of creating interest and proficiency in the agricultural pursuits. A 5-year comparison of enrollments and degrees is shown in the following table:

Year	Agriculture		Forestry		Veterinary medicine		Total	
	Enrollments	Degrees	Enrollments	Degrees	Enrollments	Degrees	Enrollments	Degrees
1	2	3	4	5	6	7	8	9
1925-26	11,412	2,127	1,074	144	471	109	12,957	2,380
1926-27	11,179	1,799	1,011	132	520	93	12,710	2,024
1927-28	11,461	1,761	1,076	139	612	99	13,149	1,960
1928-29	12,604	1,925	1,195	139	760	117	14,559	2,181
1929-30	12,722	1,938	1,269	167	884	135	14,875	2,240

RECEIPTS

For 1929-30 a summary only of receipts is given. The grand total from all sources is \$162,954,554, of which 9.9 per cent was derived from Federal funds and appropriations which include the land-grant fund of 1862, the Morrill-Nelson appropriations, Smith-Hughes funds, Hatch-Adams funds, Purnell funds, Smith-Lever and supplementary funds, and Capper-Ketcham funds; 49.2 per cent from State funds and appropriations; 4.6 from private gifts; 18.3

from institutional funds which include interest on college endowment, student tuition and fees, athletics when handled by the treasurer, and other institutional funds; 12.2 per cent from earnings and receipts of experiment stations, departmental earnings, and charges for board and lodging; and 5.8 per cent from miscellaneous sources. In Table 25, the detail for income of 52 individual institutions is recorded.

EXPENDITURES

A total of \$159,410,898 was expended by 52 land-grant colleges and universities during the fiscal year ended June 30, 1930. Of this amount 80.6 per cent was used for current expenses; 16.8 for capital outlay; and 2.6 per cent for trust funds. (See Table 26.) Salaries and wages consumed 55.6 per cent of the total; materials and supplies another 25 per cent; equipment for permanent use, 4.5 per cent; and expenditures for lands, buildings, and improvements, 12.3 per cent.

SALARIES

The salaries of 11,101 full-time staff members in 51 land-grant institutions (Massachusetts Institute of Technology is omitted) are portrayed in Table 27. The median and first and third quartile points are indicated in each column. There are included 387 deans, 3,077 professors, 1,633 associate professors, 2,637 assistant professors, and 3,367 instructors, divided on a 9-month basis—that is, service is required for 9 months only whether or not they are paid over a period of 9 or 12 months, and on an 11-12-month basis—that is, service is required during the summer without extra compensation.

Table 27 reads as follows: During 1929-30, 79 deans on a 9-month basis received a median salary of \$5,089; that is one-half of this group received \$5,089 or more and the other half received \$5,089 or less. The middle half of this group received salaries ranging from \$4,422 (Q_1) to \$5,811 (Q_3). On an 11-12-month basis, 308 deans received a median salary of \$5,244, while the range for the middle half of deans in this group is from \$4,475 (Q_1) to \$6,603 (Q_3), showing that the deans on 11-12-month basis received slightly more than those on a 9-month basis only. Similarly the salaries of professors, associate professors, assistant professors, and instructors may be read.

TABLE 23-a.—Enrollments and degrees—Summary by major curricula compared by percentages over a 5-year period (52 land-grant institutions)

NOTE.—Q₁=first or lower quartile point; Q₃=third or upper quartile point.

This table includes 51 land-grant institutions; Massachusetts Institute of Technology is omitted.

The 19 deans and 19 professors in the lower range include 18 teaching deans in University of California who draw extra compensation for deans' duties, and 18 professors in University of Florida.

CHAPTER V

STATISTICS OF TEACHERS COLLEGES AND NORMAL SCHOOLS, 1929-30

This chapter presents detailed statistics for 331 public and private teachers colleges and normal schools that reported to the Office of Education for the year ended June 30, 1930. This report is practically complete, there being only two institutions on our list from which reports were not received. Except in Table 1 no data are included for the schools of education in colleges and universities or junior colleges, since these appear in the chapter on statistics of universities, colleges, and professional schools. This chapter, with this exception, deals only with the statistics of institutions which exist primarily for the training of teachers. The statistics include data on the number of instructors, students, and graduates, the value of property owned by the institutions, and the receipts and expenditures of the institutions.

Of the 331 institutions reporting, 273 are public and 58 are private. Of the 273 public institutions, 134 are listed as teachers colleges, 66 as State normal schools, 26 as city normal schools, and 47 as county normal schools. Of the 58 private institutions, 6 are listed as teachers colleges, 17 as general training schools, 10 as physical education training schools, and 25 as nursery, kindergarten, and primary schools.

The total number of institutions listed in this report is 8 less than the number given in the report for 1927-28. Since that report was compiled, 8 of the schools have changed their status and are, therefore, no longer classed as teacher-training institutions. These are now listed in reports on other types of institutions. Seven have closed and two have merged into one. On the other hand, eight teachers colleges and normal schools that did not furnish information for that report have supplied it for this one.

Following is a complete statement of these changes, together with other changes in status and name:

CHANGES IN TABULATED LIST OF TEACHER-TRAINING INSTITUTIONS

Public institutions

State Teachers College, Troy, Ala. (Reported in 1930; did not report in 1928.)
Agricultural, Mechanical, and Normal College,¹ Pine Bluff, Ark. (Now Arkansas
State College,¹ transferred to college list.)

¹Negro.

- Henderson State Teachers College, Arkadelphia, Ark. (Reported in 1930; did not report in 1928.)
- Atlanta Normal Training School, Atlanta, Ga. (Closed.)
- State Teachers College, Mankato, Minn. (Transferred from State normal school list to teachers college list.)
- Sumner Teachers College,¹ St. Louis, Mo. (Now Stowe Teachers College¹.)
- Dewey Training School, Concord, N. H. (Now Concord Training School.)
- Plymouth Normal School, Plymouth, N. H. (Transferred from State normal school list to teachers college list.)
- Teacher Training School, Jersey City, N. J. (Taken over by State Normal School.)
- New Jersey State Teachers College, Montclair, N. J. (Transferred from State normal school list to teachers college list.)
- Spanish-American Normal School, El Rito, N. Mex. (Transferred from State normal school list to public high school list.)
- Grace A. Greene Normal School, Dayton, Ohio. (Now Dayton Junior Teachers College.)
- Warren City Normal School, Warren, Ohio. (Closed June 30, 1930.)
- Eastern Oregon Normal School, La Grande, Oreg. (Reported in 1930; did not report in 1928.)
- State Teachers College, California, Pa. (Transferred from State normal school list to teachers college list.)
- State Teachers College, Clarion, Pa. (Transferred from State normal school list to teachers college list.)
- Austin Peay Normal School, Clarksville, Tenn. (Reported in 1930; did not report in 1928.)
- South Texas State Teachers College, Kingsville, Tex. (Now Texas College of Arts and Industries, transferred to college list.)

Private institutions

- Connecticut Froebel Normal School, Bridgeport, Conn. (Closed June 30, 1930.)
- Kate Baldwin Free Kindergarten Association (normal department), Savannah, Ga. (Reported in 1930; did not report in 1928.)
- Rick's College, Rexbury, Idaho. (Transferred from private normal school list to junior college list.)
- National Kindergarten and Elementary College, Evanston, Ill. (Now National College of Education.)
- Boston School of Physical Education, Boston, Mass. (Bouvé School, Boston, Mass.). (Now Bouvé-Boston School of Physical Education.)
- Miss Niel's Kindergarten Elementary Training School, Boston, Mass. (Closed.)
- Sargent School of Physical Education, Boston, Mass. (Taken over by Boston University.)
- Springfield Normal Kindergarten-Primary Training School, Springfield, Mass. (Reported in 1930; did not report in 1928.)
- Haven Teachers College, Meridian, Miss. (Closed.)
- Progressive Series Teachers College, St. Louis, Mo. (Added to private normal school list.)
- St. Ursula's Academy and Teachers College, York, Nebr. (Now Merici College.)
- Central School of Hygiene and Physical Education, New York, N. Y. (Taken over by Russell Sage College, Troy, N. Y.)
- Ethical Culture School, New York, N. Y. (Reported in 1930; did not report in 1928.)
- The Langzettel School, New York, N. Y. (Resumed old name—Froebel League School.)

¹Negro.

St. Augustine's College,¹ Raleigh, N. C. (Transferred from private normal school list to junior college list.)

Normal College of the Precious Blood, Dayton, Ohio. (Closed.)

Pierce School of Business Administration, Philadelphia, Pa. (Teacher-training department discontinued.)

Avery Institute, Charleston, S. C. (Transferred from private normal school list to private high school list.)

Holy Names Academy and Normal School, Seattle, Wash. (Transferred from private normal school list to private high school list.)

TEN-YEAR COMPARISONS

In the decade from 1920 to 1930 great changes have taken place in the institutions primarily devoted to the preparation of teachers. Perhaps the most significant of these is the change in the organization of many of the institutions from 2-year normal schools to 4-year, degree-granting professional schools. Some grant master's degrees and one the doctor's degree. In the decade there was an increase of 95 in the number of teachers colleges and a decrease of 72 State normal schools. Forty-five teachers colleges in 1920 granted 1,296 first degrees and the 140 teachers colleges in 1930 granted 11,073 degrees, an increase of 754 per cent. Twelve of the 140 colleges also conferred 425 master's degrees and one institution (George Peabody College for Teachers) conferred the doctor's degree on 15 persons. The colleges of education in our large universities, it should be remembered, are not included in any of these figures.

The number of graduates from nondegree teacher-training courses increased 28,215, or 134.2 per cent, from 1920 to 1930. There were 49,227 graduated in 1930 and only 21,012 in 1920. In the past 10 years the number of instructors in teachers colleges, and normal schools increased 4,886, or 50.9 per cent, from 9,587 in 1920 to 14,473 in 1930.

The greatest increases in the number of students were in the teacher-training courses in summer sessions. The increase in summer session students from 1920 to 1930 was 66,508, or 89.3 per cent. In 1920 there were 73,342 summer students and in 1930 there were 138,856. Many of these students are persons employed in the school system who are obtaining further training. They do not represent new material in the teaching field. The number of students in the teacher-training courses, regular session, who are new material in the teaching field, increased by 26,089, or 19.3 per cent. In 1920 there were 135,435 students in these courses and 161,524 in 1930. The total number of different students served by these institutions in teacher training and all other resident courses, long and short, in regular sessions and summer sessions increased 116,399, or 71.5 per cent, in the decade. There

¹ Negro.

were 162,796 different students receiving instruction in 1920 and 279,195 in 1930.

As would be expected the offering of a higher type of service to a larger number of students has necessitated additional expenditures for grounds, buildings, and equipment, and increased expenditures for the teaching staff. The number of bound volumes in the libraries has increased by 1,679,838, or 70.4 per cent from 2,385,238 in 1920 to 4,065,076 in 1930. The value of all equipment, including the libraries, increased a total of \$15,981,296, or 137.3 per cent, from \$11,642,932 in 1920 to \$27,624,228 in 1930.

The value of grounds and buildings increased 95.6 per cent, or \$85,280,235, during the decade, from \$89,159,610 in 1920 to \$174,439,845 in 1930. The value of all property, including endowments, increased 99.5 per cent, or \$112,933,220, from \$113,523,594 in 1920 to \$226,456,814 in 1930.

In the 10-year period, the total expenditures of teachers colleges and normal schools rose from \$23,312,216 in 1920 to \$53,240,802 in 1930, a total increase of \$29,928,586, or 128.4 per cent. Partially this was offset by an increase in the value of endowment funds of \$11,671,549, or 91.1 per cent, \$12,721,142 in 1920 to \$24,392,741 in 1930.

TABLES PRESENTED AND CHANGES IN BIENNIUM 1928 TO 1930

Table 1 has been compiled to show the total number of teacher-training students in regular session, including the students in teacher-training courses in schools of education in the colleges and universities as well as the students in teacher-training courses in teachers colleges and normal schools, to give some idea of the total number of persons preparing to teach. It has seemed best to omit the number of students in summer sessions as so large a proportion of these are already employed in educational work and to omit the number of students reported by secondary schools as enrolled in teacher-training courses as these data in general seem unreliable and are not yet available for 1930. The 277,576 students shown in Table 1 (197,514 in publicly controlled institutions and 80,062 in private institutions) are a conservative estimate of the number of persons preparing to teach. Approximately 62,750 of these were granted degrees in 1930 from teachers colleges and normal schools or graduated with degrees in education from colleges and universities.

Table 2 gives a review of these statistics since 1900 similar to that given in previous years except that the data for instructors and students in teacher-training courses have been separated for regular session and summer session so as to show the trends separately. The number of instructors employed has changed relatively little since 1928. The total number, excluding duplicates in all departments in 1930, is only

one more than in 1928. This is accounted for by the fact that there were fewer students in 1930 than in 1928. Although the increases for the decade were great, the peak was reached in 1928 or 1929. Statistics for 1930 show decided drops in the enrollment in all types of teacher training, except in the teachers colleges which grant degrees. The following tabulation shows in detail for men and women in each type of training what is shown in general terms in Table 2.

Teachers colleges and normal schools—Enrollment, 1928-1930

¹ A loss is indicated by a minus sign.

In teacher-training courses in the regular session, 3,927 more men attended in 1930 than in 1928, but 4,483 fewer women attended. In all types of institutions except the teachers colleges fewer women

attended in 1930 than in 1928. There was a drop in attendance at summer sessions of both men and women amounting to 5,429.

In all teacher-training courses, excluding duplicates in the regular and summer sessions, there was a net drop in enrollment of 10,091 students. In all courses, both teacher-training and academic, in teacher-training institutions, there was a drop in enrollment of 18,235 students, or 6.1 per cent. Evidently the courses not designed to train teachers are gradually disappearing and more men and fewer women are preparing to enter the teaching profession.

The 60,089 students in correspondence and extension courses in 1929-30 were 37.2 per cent as many as were enrolled in residence in the regular session. Of the 279,195 resident students in all courses 264,257 were enrolled in teacher-training courses, leaving 14,938, or 5.4 per cent, who were pursuing other courses.

Tables 3-27, inclusive, are summaries by States of 331 public and private teachers colleges and normal schools. Table 3 summarizes the number of instructors; Table 4, the number of students; Table 5, the number of graduates; Table 6, the size of libraries, value of property, and total expenditures; and Table 7, the amount of receipts from various sources.

The six tables, from 8 to 13, inclusive, summarize the data by States for teachers colleges only.

The five tables, from 14 to 18, inclusive, give a similar summary for State normal schools.

Tables 19 and 20 give the information for the 26 normal schools maintained by city boards of education in 24 different cities, there being two institutions, one for white and one for colored in two of the cities.

Tables 21 and 22 give data for the 47 county normal schools reported by Michigan and Wisconsin, the only States having this type of school.

Tables 23 to 27 give the data submitted by 52 private teacher-training schools, not teachers colleges. Some of these schools offer specialized training for one field only such as kindergarten-primary, physical education, or commercial education.

The remaining 15 tables give detailed statistics for each teachers college, State normal school, and private normal school reporting in 1930.

CHAPTER VI

STATISTICS OF PUBLIC HIGH SCHOOLS, 1929-30

Prepared in the Division of Statistics

By EMERY M. FOSTER, *Chief*, and RUSSELL M. KELLEY, *Assistant statistician*
with the cooperation of CARL A. JESSEN, *Specialist in Secondary Education*

The reports received by the Office of Education from high schools for the school year 1929-30 carried significant data on number of schools, size of schools, enrollments, reorganization, years of public-school training offered, length of term, holding power and graduates, teachers, size of libraries, and value of buildings and grounds. The tables included later in this chapter give detailed data on these subjects. A few of the more important generalizations and interpretations to be drawn from these tables will be discussed briefly in the textual sections which follow.

NUMBER OF HIGH SCHOOLS

According to the file kept in the Office of Education there were 23,930 high schools in the United States in 1930. Reports received and tabulated represented 22,237 schools, 92.9 per cent of the total number.

TABLE A.—Number of high schools and number reporting in 1930

Montana.....	212	200	Total United States.....	23,930	22,237

A report was received from every high school listed in Colorado, Delaware, the District of Columbia, Nevada, and Rhode Island. Reports were received from more than 95 per cent of the schools listed in 21 other States. For only two of the States did the returns fall below 80 per cent.

Approximately three-fourths of the high schools were of the regular types, that is, the pupil was offered high-school work following completion of an elementary-school course 7, 8, or 9 years in length. The remaining one-fourth of the schools were of the reorganized types, that is, they were operating on a plan other than that of regular high schools. The reorganized system is generally distinguished by

FIGURE 1

the inclusion of a junior high school unit. As shown in Figure 1, the percentage of high schools that are of the reorganized type has been steadily increasing.

SIZE OF HIGH SCHOOL

According to the reports for the year 1930, small schools were most frequently of the regular type; in the enrollment group having fewer than 100 pupils per school, the regular high schools outnumbered the reorganized type nearly 10 to 1. In schools having between 100 and 300 pupils enrolled, the regular schools were twice as numerous as reorganized schools. In all enrollment groups from 300 to 2,500, the reorganized schools were clearly in the lead; the ratio of reorganized to regular schools within these ranges of enrollment was 2 to 1. In very large schools, those enrolling 2,500 or more pupils, the

regular schools again took the lead, the ratio being 2.66 to 1. When one reflects that only one-fourth of the total number of high schools are of the reorganized type, it is apparent that reorganization is most frequently effected in schools of medium to large size, especially in schools which, after reorganization, have 500 to 1,000 pupils enrolled.

Considering all high schools reporting (22,237) the average number of pupils per school in 1930 was 234 as compared with an average enrollment of 211 pupils in 17,710 high schools reporting in 1926. Further evidence of the trend toward larger high schools is noted in the decrease in the proportion of schools having an enrollment of 100 or fewer pupils. In 1926, these were 59.6 per cent of the schools reporting; the percentage in 1930 was 54.¹ Table B shows changes in the number of schools by size from 1926 to 1930.

TABLE B.—Numbers and percentages of public high schools by size in 1926, 1928, and 1930

Enrollment groups	1926		1928		1930	
	Number of schools	Per cent of total	Number of schools	Per cent of total	Number of schools	Per cent of total
1	2	3	4	5	6	7
Fewer than 50.....	5,742	32.4	5,512	30.4	5,943	26.7
51 to 100.....	4,810	27.2	4,736	26.2	6,064	27.3
101 to 200.....	3,220	18.2	3,354	18.5	4,603	20.7
201 to 500.....	2,191	12.3	2,452	13.5	3,111	14.0
501 to 1,000.....	990	5.6	1,130	6.3	1,421	6.4
1,001 and more.....	767	4.3	930	5.1	1,095	4.9
Total.....	17,710	100.0	18,114	100.0	22,237	100.0

Schools with an enrollment of fewer than 50 pupils comprised 26.7 per cent of the total number of high schools in 1930; they enrolled only 3.4 per cent of the pupils. On the other hand, 4.9 per cent of the total number of public high schools enrolled more than 1,000 pupils each; 38.3 per cent of all the pupils were registered in them.

New York City reported the largest high school for each of the last three bienniums. In 1926 the DeWitt Clinton High School had an enrollment of 8,611 pupils; in 1928 the James Monroe High School had a registration of 9,682 pupils; and in 1930 the DeWitt Clinton again became the largest, with an enrollment of 10,059 pupils.

More than 5,000 pupils were enrolled in each of 29 public high

¹ Due to the more complete return of forms in 1930, the actual number of schools in all enrollment groups shows an increase for this year over 1926 and 1928. The percentage columns indicate, however, a decrease in the relative number of small schools.

schools of the United States reporting to the office of education in 1930. The names and enrollments of these schools are as follows:

TABLE C.—Public high schools enrolling more than 5,000 pupils in 1930

ENROLLMENT

The total enrollment in the high schools reporting in 1930 was 5,212,179. This total was distributed as follows: Junior high schools, 1,036,919; junior-senior high schools, 979,176; senior high schools, 543,813; and regular high schools, 2,652,271.

On the basis of enrollment data supplied by State departments of public instruction it appears that there were 253,753 pupils attending the 1,693 high schools not included in the tabulations made by the Office of Education. By adding this number to the enrollment cited above one arrives at the figure 5,465,932 as the most complete count of pupils enrolled in all types of high schools existing during the school year, 1929-30. Of this number 4,399,422 were registered in the last four years of the public-school system.

Since data are available from the census of 1930 it may be of interest to compare enrollments in these last four years of the public-school system with the census count of persons of ages 15, 16, 17, and 18. No one will contend that all pupils registered in these high-school grades are of these ages. The assertion is ventured that these ages, as nearly as any other four that can be mentioned, correspond to the ages of pupils in these four high-school years. According to the census of 1930 there were in the United States 9,316,670 persons of

ages 15-18, inclusive. During the same year there were, as already stated, 4,399,422 pupils enrolled in the last four years of the public-school system. The enrollment figure is 47.2 per cent of the census figure. If the enrollments in secondary departments of colleges and normal schools and in private high schools and academies are added to the public high-school enrollments one finds that the total registration of pupils in these four secondary school grades was 51.5 per cent of the number of persons who on the basis of age formed the potential secondary school population.

EXTENT AND NATURE OF REORGANIZATION

If one accepts 5,465,932 as the most complete count of pupils enrolled during the school year 1929-30 in all types of public high schools, one finds that 19 per cent of the total number were registered

FIGURE 2

in separately organized junior high schools, 17.9 per cent in junior-senior high schools, and 9.9 per cent in senior high schools. Reorganized high schools of one type or another cared for 2,559,908 pupils, 46.8 per cent of the total high-school enrollment. Regular high schools provided educational facilities for 2,906,024 pupils, 53.2 per cent of the total registration. These percentages are shown graphically in Figure 2.

Since regular high schools are usually of the 4-year type,² it is of interest to compare enrollments in the last four years of reorganized school systems with total enrollments in the last four high-school years. Of the 4,399,422 pupils enrolled in these last four high-school years, 1,493,398 pupils, approximately one-third, were in 1930 attending reorganized schools. Of the total number registered in the last four years of the school system 7.3 per cent were in junior high schools, 14.3 per cent in junior-senior high schools, 12.3 per cent in senior

² Some small high schools offer the pupil only 1, 2, or 3 years of a regular 4-year course. In these cases the pupil must complete his work elsewhere before a high-school diploma can be issued to him. In 1930 a total of 71,542 pupils were attending schools having abbreviated courses of this kind.

high schools, and 66.1 per cent in regular high schools. These percentages form the basis for Figure 3.

The question is often raised as to what percentage of the pupils in the seventh and eighth grades (or in corresponding grades just preceding the last four years in other types of systems) are in junior high school organizations. This can be estimated if one makes adjustments for each State which has schools organized on both 11-grade and 12-grade bases or, as happens in the cases of 2 States, 12-grade and 13-grade bases. After making such adjustments one finds that in 1930 nearly 4,000,000 pupils were assigned to the two years of the public-school system which immediately precede the last four. A total of 1,066,510 of these pupils, 26.8 per cent, were registered in reorganized schools. The range in extent of enrollment of these pupils in reorganized schools ran from 63.5 per cent in the District of

FIGURE 3

Columbia (a city system) and 51.9 per cent in Rhode Island to 0.7 per cent in Louisiana.

Of the 2,559,908 pupils enrolled in reorganized schools, 1,736,428 (67.8 per cent) were in some kind of 3-year unit such as 3-year junior, 3-year senior, 3-year junior-senior, or the 3-year unit of a 2-3 or 3-2 organization. The remaining 32.8 per cent of the pupils in reorganized schools were registered in 2, 4, 5, or 6 year units. About one-half of these, 15.3 per cent of the total, were attending 6-year undivided schools.

Not only do the 3-year units care for a larger number of pupils than do the other kinds of reorganized schools, but they also are individually larger than 4, 5, or 6 year units. This fact is apparent from Table D. It must not be concluded that units of more than three years in length are inconvenient in larger school systems. It does appear that these longer units are adopted most frequently in situations where, due to a small number of pupils per grade, the 3-year unit is less advantageous.

TABLE D.—*Frequency and size of various kinds of reorganized schools*

Types and kind of school	Per cent of pupils enrolled (within each type)	Average number of pupils per school	Average number of pupils per grade
Junior high schools:			
2-year	8.6	371	185
3-year	88.4	664	221
4-year	3.0	141	35
Junior-senior high schools:			
5-year combinations (2-3, 3-2, 5-year undivided)	4.0	340	68
6-year combinations (3-3, 2-4, 4-2, 6-year undivided)	96.0	296	49
Senior high schools:			
3-year	83.2	898	299
4-year	16.8	633	158

NUMBER OF YEARS IN SCHOOL SYSTEM

Of the 4,145,669 pupils¹ registered in the last four years of the public high schools, 3,618,741 (87.3 per cent) were in school systems offering 12 years of elementary and secondary education; 518,453 pupils (12.5 per cent) were in 11-year systems; and 8,475 pupils (0.2 per cent) were in 13-year systems. Of the white pupils, 88 per cent were in 12-grade systems; 11.8 per cent, in 11-year systems; and 0.2 per cent, in 13-grade systems. Of the Negro pupils, 63 per cent were in 12-grade systems; 37 per cent in 11-grade systems; only 9 Negro pupils were reported in 13-grade systems. The large percentages of Negro pupils in 11-year systems is ascribable to a geographical rather than a race condition. As inspection of the tables will reveal, the 11-year system is prevalent for white as well as Negro pupils in the Southern States.

LENGTH OF TERM

The reader is advised to keep in mind the distinction between length of term offered to pupils and number of days attended by pupils. Length of term is a measure of opportunity for schooling offered to pupils; attendance is a measure of the extent to which the opportunity is accepted. The discussion here presented deals with length of term only.

A small porportion of high schools in 1930 offered terms 150 days or less in length. Since these schools were generally located in districts having a small population, a relatively low number of pupils were affected by short terms. Data contained in the tables show that

¹ It should be explained here that this enrollment figure is for the schools whose complete reports were received by the Office of Education in 1930. In earlier sections of this discussion it was possible to draw upon the very complete figures supplied by State departments of public instruction for numbers of schools and enrollments. However, the types of information which States gather regarding high schools vary greatly from State to State; consequently, comparability on many items is totally absent. The reader is therefore informed that from this point forward in both discussion and tables the data are secured from reports made by high schools directly to the Office of Education. As already stated, these reports were received from 22,237 schools, 92.9 per cent of the total number of public high schools in existence.

only 14 of every 10,000 pupils in high schools of the United States had opportunity for fewer than 151 days of school in 1930. Among these 14 pupils 3 were enrolled in schools kept open 130 days or less.

At the other end of the scale we find that 1,382 pupils of every 10,000 had opportunity to attend school for more than 190 days. The largest group, more than four-fifths of the total, had a chance to attend between 171 and 190 days. This condition was to be expected since the regular 9-month term falls within these limits. Finally, 4.5 per cent of the pupils attended schools which were in session between 151 and 170 days, that is, schools which had a term of $7\frac{1}{2}$ to $8\frac{1}{2}$ months.

The short terms occurred much more frequently in regular than in reorganized schools. Conversely the terms more than 190 days in length occurred most often in reorganized schools. Since reorganized schools as a group are considerably larger than regular schools, the contrast observed with regard to length of term may be due rather to size of school than to type of organization.

A larger percentage of Negro than of white pupils was, in 1930, attending high schools having short terms. The number of such pupils was, however, so small that the higher percentage is not of great significance. The proportion of Negro pupils who had opportunity to attend more than 191 days is slightly lower than for white pupils. A condition which should not be overlooked in this connection is that in the South, where most of the Negro pupils are enrolled, the short terms appear relatively more often and the long terms less often than in other sections of the Nation for all pupils whether white or Negro. It would appear, therefore, that race is not an important factor in determining the length of term offered to high-school pupils.

HOLDING POWER AND HIGH-SCHOOL GRADUATION

Increasing survival of students through high-school grades is shown by the growing percentages from year to year of secondary school pupils registered in the senior class. In 1910 only 12.2 per cent of the total high-school enrollment was in the senior year; in 1920 it was 14.1 per cent; and in 1930 it had increased to 16.6 per cent. These percentages and parallel information for each of the bienniums between 1920 and 1930 are shown in Table E. It is significant to note that, despite the great influx of students which has taken place in secondary schools during the past 10 years, the percentage of pupils retained until they are seniors has, with the exception of one slight recession in 1928, steadily increased.

TABLE E.—*Distribution of pupils in the last four years of public high schools, 1910, and 1920-1930, by 2-year periods*

Items	1910	1920	1922	1924	1926	1928	1930
1	2	3	4	5	6	7	8
Pupils in first year.....	392,506	742,320	869,100	934,192	1,108,158	1,212,893	1,400,459
Per cent of total.....	42.9	40.1	39.1	36.9	36.4	36.3	35.4
Pupils in second year.....	247,936	498,796	607,762	692,558	823,191	906,179	1,132,061
Per cent of total.....	27.1	27.0	27.4	27.4	27.0	27.2	27.4
Pupils in third year.....	163,176	346,684	426,633	506,286	611,946	670,080	852,012
Per cent of total.....	17.8	18.8	19.2	20.0	20.1	20.1	20.6
Pupils in fourth year.....	111,444	261,360	316,811	396,853	504,355	546,529	684,985
Per cent of total.....	12.2	14.1	14.3	15.7	16.5	16.4	16.6

More than one-half million students were graduated from public high schools in 1929 and nearly 600,000 completed their high-school work in 1930. The exact number reported in 1930 was 591,712. Of this number 202,747 were graduated from rural schools, by which is meant schools located in places of 2,500 population or less. The remaining 388,972 completed their work in schools located in towns and cities having a population greater than 2,500. Boys made up 46 per cent of the graduates from urban schools, while only 43.5 per cent of the graduates from rural schools were boys.

A little less than one-third of those who were graduated from high school in the spring of 1929 went to college the following fall, while more than one-tenth continued their education in other institutions, such as normal schools and business schools. Thus approximately 45 per cent continued their education the year after high-school graduation. The only important difference shown between graduates of urban and rural high schools is that urban-school graduates matriculated more frequently in college than did graduates of rural schools; graduates of rural high schools were more likely than graduates of urban schools to enter other institutions. In the gross the percentage of graduates continuing their education is approximately the same for rural as for urban high schools. These percentages are shown in Table F.

TABLE F.—*Percentages of public high-school graduates of 1929 continuing their education the following school year, urban and rural*

Institution	Graduates of all high schools			Graduates of rural high schools			Graduates of urban high schools		
	Boys	Girls	Total	Boys	Girls	Total	Boys	Girls	Total
1	2	3	4	5	6	7	8	9	10
Going to college.....	35.87	27.90	31.48	29.89	26.43	27.93	38.70	28.66	33.23
Going to other institutions.....	8.63	16.30	12.86	11.03	20.17	16.20	7.50	14.30	11.20
Total continuing their education.....	44.50	44.20	44.34	40.92	46.60	44.13	46.20	42.96	44.43

While, as mentioned earlier in this section, high-school pupils are retained longer and increasing numbers are graduated, the percentage of graduates continuing their education has not varied significantly during the past 10 years. As may be seen from Table G, this observation is applicable to attendance at both colleges and other educational institutions. It will be noted that the percentage of boys attending college is decreasing, while that for girls is increasing. It would appear that more and more boys are finding a high-school education worth while in itself even if it can not be followed by a college course.

TABLE G.—Percentages of public high-school graduates continuing their education the following year, 1921-1929

High-school graduation year	Percentage attending college the next year			Percentage attending some other institution		
	Boys	Girls	Total	Boys	Girls	Total
1	2	3	4	5	6	7
1921.....	39.8	22.5	32.1	9.2	15.5	14.1
1923.....	37.2	25.7	31.2	10.1	17.4	13.6
1925.....	37.4	27.8	32.0	9.0	17.9	13.7
1927.....	35.0	27.0	30.5	8.1	15.7	12.3
1929.....	35.9	27.9	31.5	8.6	16.3	12.9

TEACHERS

The total number of teachers in all types of high schools in 1930 was 213,306, an increase of 30,669 over the number reported in 1928 and 115,652 over that for 1920. Of the total number of high-school teachers, 52.7 per cent were teaching in the regularly organized high schools in 1930, and 47.3 per cent in the reorganized high schools. In 1920 about 89.7 per cent were in regular high schools and 10.3 per cent in reorganized high schools.

Of the total number of high-school teachers reported in 1930 there were 209,121 in white high schools and 4,185 in high schools for Negroes. Of those teaching in white high schools 52.5 per cent were in the regularly organized schools and 47.5 per cent in the reorganized schools. Of the teachers in schools for Negroes, 61.3 per cent were in the regular high schools and 38.7 per cent in the reorganized schools. Of the total number of teachers in white high schools in 1920 about 89.6 per cent were in regularly organized schools and 10.4 per cent in the reorganized schools, and of the teachers in the high schools for Negroes only in 1920 about 93.5 per cent were in the regular high schools and 6.5 per cent in reorganized schools.

Of the total number of secondary-school teachers reported in 1930 there were 74,532 men and 138,774 women or 34.9 and 65.1 per cent,

respectively. In 1920 the percentage of men was 35.2 and the percentage of women was 64.8.

The following table shows the percentages of men and women teachers in 1920 and in 1930 for regular and for reorganized high schools by white and by Negroes:

TABLE H.—Percentages of men and women teachers in regular and reorganized high schools for white and for Negro pupils

Type of school	1920		1930	
	Men	Women	Men	Women
Regular (white)	36.1	63.9	38.7	61.3
Reorganized (white)	26.0	74.0	30.5	69.5
Regular (Negro)	49.7	50.3	43.1	56.9
Reorganized (Negro)	38.5	61.5	36.9	63.1

LIBRARIES

In many high schools housed in buildings with elementary schools, the library is used in common and therefore can not be considered a high-school library. The data in this study are for libraries in buildings housing a high school only. In 1930 there were 6,013 such libraries reported, having 12,025,549 volumes or an average of 2,000 volumes in each library.

The libraries in regular high schools were smaller than those in reorganized high schools, the average size being 1,717 and 2,404 volumes, respectively, per library.

The average size of high-school libraries has increased steadily since 1926 as shown in the following table:

TABLE I.—Size of high-school libraries

Year	Average number of volumes in library		
	Regular high school	Reorganized high schools	All high schools
1926	1,537	1,881	1,652
1928	1,653	2,225	1,867
1930	1,717	2,404	2,000

VALUE OF PROPERTY

The data for value of property are confined to those schools which are used for high-school purposes only; separately housed junior high schools are included. The average value of the grounds and buildings of separately housed high schools increased from \$235,094 in 1926 to \$236,787 in 1928, and \$255,000 in 1930. The value of the equipment

increased from \$22,165 in 1926 to \$24,751 in 1928, and then to \$26,130 in 1930.

The plant of the reorganized high school is more valuable than that of the regular high school. In 1930, the grounds and buildings of the average regular high school were valued at \$200,647 and the equipment \$20,564. For reorganized high schools these values were \$331,022 and \$83,997, respectively, more than 50 per cent greater than for regular schools. This is probably due in part to the fact that the reorganized schools are chiefly in cities and have large enrollments.

The average value of the grounds and buildings of the regular high schools decreased from \$207,146 in 1926 to \$200,647 in 1930, but for the reorganized schools it increased from \$287,978 to \$331,022 during this period.

CHAPTER VII

STATISTICS OF PRIVATE HIGH SCHOOLS AND ACADEMIES 1929-30

This chapter gives the statistics of 2,760 private high schools and academies in continental United States for the school year 1929-30.¹ In addition there are 200 schools listed in our files from which reports have been received in some past year but which did not report in 1930, and 298 schools to which forms have been sent but which have never responded. The forms from none of these schools have been returned unclaimed. This makes a total of 3,258 schools which apparently are still in existence. Reports were therefore received from 84.7 per cent of these schools. In addition to secondary school pupils, many of these schools have elementary and college departments. Some of the tables in this chapter deal with the secondary departments only. Others give some data on the elementary and college work.

Table 1 shows a general review of statistics of these schools as reported to this office since 1890. There were 312 more schools reported in 1930 than 2 years before and 667 more than reported 10 years before, in 1920. While part of this increase is due to the growth in the number of schools, much is due to better reporting. In 1929-30 the secondary departments of these schools enrolled more than 309,000 pupils including 9,800 Negroes, employed 22,000 teachers, and graduated more than 50,000 pupils.

Table 2 compares the figures for enrollment of secondary students by grades and collegiate students in 1930 with similar data for other years. The gradual increase in the percentage of students in the fourth year of high school since 1920 shows the holding power of these schools. In 1910 only 16.5 per cent of the students reported by grade were in the fourth year; in 1920, 16.6 per cent; but in 1930 the figure increased to 19.9 per cent.

Table 3 shows the enrollment of secondary students in 1920 according to the denominational control of the schools compared with similar data reported in previous years. As more complete returns are received from schools of some denominations than from others in any

¹ The tables also include data from 53 schools in the outlying parts of the United States which are not considered in this discussion.

one year and in different years, care should be taken in drawing conclusions as to the relative growth of enrollments in denominational schools.

Table 4 gives a distribution of secondary and collegiate pupils and secondary instructors for 1930 according to the denominational control of schools. The six denominations reporting the largest number of schools are Roman Catholic, 1,648; Episcopal, 97; Methodist, 77; Seventh-day Adventist, 74; Presbyterian, 71; and Baptist, 66. There were 647 schools reported nonsectarian.

Table 5 shows by States the number of elementary and secondary instructors, the elementary, secondary, and collegiate students, the bound volumes in the library, value of property, and the number of schools having boarding departments for the 2,760 schools reporting.

There were enrolled 329,050 elementary pupils, 309,052 secondary pupils, and 8,069 postgraduate and collegiate students in these schools in 1930. This is a total of 646,171 students, as against 553,260 reported in 1928 and 437,008 in 1920. In 1928 statistics showed 49.31 per cent of the enrollment in elementary departments, 48.67 per cent in secondary departments, and 2.02 per cent in postgraduate and college departments. In 1930 these percentages were 50.92, 47.83, and 1.25, respectively, which shows little change in the proportion. This change may be due to the character of the 300 additional schools reporting in 1930.

In 1930 these 2,760 schools had more than 6,300,000 bound volumes in their libraries and endowment funds of about \$79,500,000. Their physical plants were worth about \$625,600,000. About half of these schools maintain boarding departments.

Table 6 shows the number of graduates in 1930 and in 1929 from the schools reporting on this item and the number of 1929 graduates continuing their education. Of the boys, 53.98 per cent went on to college and 7.14 per cent to other institutions, 61.12 per cent continuing their education. For girls these percentages are 31.03, 23.95, and 54.98 respectively. This is a smaller percentage continuing their education than reported in 1928 for the class of 1927, of which 57.54 per cent of the boys went to college and 7.72 per cent went to other institutions, 65.26 per cent in all; and 32.68 per cent of the girls went to college and 24.34 per cent to other institutions, 57.02 per cent in all.

Table 7 shows the secondary students only, giving by States those enrolled in each year of the high-school course and the special students not classified by year. The percentage of unclassified pupils has fallen from 5.8 per cent in 1920 to 3.6 per cent in 1930.

Table 8 shows by States the number of schools for boys only, girls only, and for both with their enrollment, the number of schools having teacher-training courses with their enrollment, and the number

of schools reporting 4-year curricula with their enrollments. There were 504, or 18 per cent, of the schools for boys only, but they enrolled 28 per cent of the secondary pupils. The 873 schools for girls only were 32 per cent of the schools, but enrolled only 30 per cent of the pupils. The remaining 1,383 coeducational schools were 50 per cent of all, but enrolled only 42 per cent of the pupils. Eighty-six per cent of the schools offered a 4-year curriculum and enrolled 91 per cent of the pupils. The remainder of the pupils were enrolled in schools offering less than four years or in reorganized schools having 5 or 6 year courses.

Table 9 brings together data for schools for the Negro race which have been included in the previous tables. There were 18 more schools reported in 1930 than in 1928 and 10 fewer than in 1920, so that the figures show an apparent decrease in private secondary schools for Negroes since 1920. This, however, may be only an apparent decrease, due to fewer reporting.

Table 10 shows by States the enrollment in academic, commercial, technical, agricultural, home economics, general, and industrial courses. The enrollment in teacher-training courses is given in Table 8. Similar data on enrollment by courses were collected in 1924 and published in the Biennial Survey of Education, 1922-1924. A comparison of these two studies is given below.

Enrollment by course of study in private secondary schools in 1924 and 1930

Course of study	1924			1930		
	Number of schools	Number of pupils	Per cent of total	Number of schools	Number of pupils	Per cent of total
1	2	3	4	5	6	7
Academic.....	2,115	194,940	86.05	2,127	202,824	70.66
General.....				929	49,018	17.08
Commercial.....	740	18,210	8.04	704	26,002	9.06
Technical or manual training.....	77	1,980	.87	52	1,657	.59
Agricultural.....	71	1,308	.62	53	858	.30
Home economics.....	254	6,772	2.99	152	3,475	1.21
Industrial or trade.....	27	745	.33	14	242	.08
Teacher training.....	161	2,497	1.10	404	2,957	1.03
Total.....		226,542	100.00		287,033	100.00

As enrollments in general courses were not requested in 1924, it is assumed that they were included under academic courses. With this in mind it appears that proportionately 29.19 per cent more pupils are enrolled in academic and general courses in 1930 than in 1924. A smaller percentage were enrolled in each of the other courses in 1930 than in 1924 except in the commercial course, which increased by 42.79 per cent, although 36 fewer schools reported this course.

There were 243 more schools that reported students in teacher-training courses. The increase in students, however, was 460, and the percentage of all students in these classes decreased by 0.07 per cent.

A large number of schools under religious control reported a very few students each in this course, which raises the question whether in these schools it is a teacher-training course or a prevocational course leading up to professional training later.

Table 12 gives certain data for each school reporting 100 or more students enrolled in secondary courses. For 1930 detailed statistics are given for 956 institutions, which are 34.6 per cent of those reporting. A 10-year comparison of the number of these larger schools is not possible because detailed statistics were not published for any schools in 1920. However, in 1922, eight years ago, only 594, or 30.3 per cent, of the schools reporting enrolled 100 or more secondary pupils.

As there are so few private secondary schools that have a 5-year or 6-year high-school organization, no summary of these schools is given, but they can be located by reference to column 6 in Table 12, which gives the length of the high-school course.
